Advanced Trauma Life Support Misadventures in Health Care Inside Stories [Psychology Press](#) *Misadventures in Health Care: Inside Stories* presents an alternative approach to attributing the cause of medical error solely to the health care provider. That alternative, the systems approach, pursues why an incident occurs in terms of factors in the context of care that affect the care provider to induce an error. The basis for this approach is the fact that an error is an act, an act is behavior, and behavior is a function of the person interacting with the environment. Eleven vignettes illustrate the importance of the systems approach by describing health care incidents from the perspective of the care providers--the perspective that can identify the factors that actually affect the provider. These stories provide general readers with opportunities to apply their knowledge in analyzing incidents to identify error-inducing factors. This book is important reading for policymakers, researchers and practitioners in law and in all medical specialties, and professionals in the social sciences, human factors, and engineering. In addition to sensitizing the reader to the importance of contextual factors in error, *Misadventures in Health Care* is a case study reference to supplement texts in professional schools such as law and medicine, as well as the full range of academic disciplines. It also is important reading for the general public because it presents an approach for addressing a very pressing social problem-- that of misadventures in health care. **Critical Care Neurology Part I Neurocritical Care** [Elsevier](#) *Critical Care Neurology, Part I: Neurocritical Care* focuses on the care specialists and general neurologists that consult in the ICU and their work with patients in acute, life-threatening situations who are dealing with neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness. These two separate clinical situations form the pillars of neurocritical care, hence these practices are addressed via two separate, but closely related, HCN volumes. Chapters in both focus on pathophysiology and management, and are tailored for both general neurologists and active neurocritical specialists, with a specific focus on management over diagnostics. Part I addresses the principles of neurocritical care and the management of various neurologic diseases. Part II addresses the interplay between neurologic complications and the surgical, medical, cardiac, and trauma of critical illnesses that most typically present in the ICU. Provides an essential neurocritical care overview for general neurologists Presents neurocritical care specialists with an update on severe neurological illness management Offers coverage of all the most frequent neurologic diseases requiring intensive care Includes chapters authored by global leaders in the field, providing the broadest, most expert coverage available on the topics discussed **Critical Care Neurology Part II Neurology of Critical Illness** [Elsevier](#) *Critical Care Neurology, Part II: Neurology of Critical Illness* focuses on the care specialists and general neurologists that consult in the ICU and their work with patients in acute, life-threatening situations who are dealing with neurologic or neurosurgical crises emanating from either a preexisting neurologic syndrome or from a new neurologic complication appearing as a result of another medical or surgical critical illness.
