THE PLEISTOCENE OLD WORLD

REGIONAL PERSPECTIVES

Springer Science & Business Media Regional approaches to past human adaptations have generated much new knowledge and understanding. Researchers working on problems of adaptations in the Holocene, from those of simple hunter-gatherers to those of complex sociopolitical entities like the state, have found this approach suitable for comprehension of both ecological and social aspects of human behavior. This research focus has, however, until recently left virtually untouched a major spatial and temporal segment of prehistory-the Old World during the Pleistocene. Extant literature on this period, by and large, presents either detailed site specific accounts or offers continental or even global syntheses that tend to compile site specific information but do not integrate it into whole constructs of functioning sociocultural entities. This volume presents our current state of knowledge about a variety of regional adaptations that characterized prehistoric groups in the Old World before 10,000 B. P. The authors of the chapters consider the behavior of humans rather than that of objects or features and present data and models for various aspects of past cultures and for culture change. These presentations integrate findings and understandings derived from a number of related disciplines actively involved in researching the past. Data and interpretations are offered on a range of Old World regions during the Paleolithic, including Africa, Asia, Australia, and Europe, and chronological coverage spans from the Early to Late Pleistocene.

OPERATIONS MANAGEMENT IN AUTOMOTIVE INDUSTRIES

FROM INDUSTRIAL STRATEGIES TO PRODUCTION RESOURCES MANAGEMENT, THROUGH THE INDUSTRIALIZATION PROCESS AND SUPPLY CHAIN TO PURSUE VALUE CREATION

Springer Science & Business Media This book has proved its worth over the years as a text for courses in Production Management at the Faculty of Automotive Engineering in Turin, Italy, but deserves a wider audience as it presents a compendium of basics on Industrial Management, since it covers all major topics required. It treats all subjects from product development and “make or buy”-decision strategies to the manufacturing systems setting and management through analysis of the main resources needed in production and finally exploring the supply chain management and the procurement techniques. The very last chapter recapitulates the previous ones by analysing key management indicators to pursue the value creation that is the real purpose of every industrial enterprise. As an appendix, a specific chapter is dedicated to the basics of production management where all main relevant definitions, techniques and criteria are treated, including some numerical examples, in order to provide an adequate foundation for understanding the other chapters. This book will be of use not only to Automotive Engineering students but a wide range of readers who wish to gain insight in the world of automotive engineering and the automotive industry in general.
