Ford Model a Instruction Book Wang Mini-Computer Automatic Database Management System Auto-System User's Manual AUTO-SYSTEM is an automated data base management system. It is a management tool to more efficiently create and control informational data bases, and the available ADP resources. The AUTO-SYSTEM eliminates, for many, the need of hiring their own programmers to write repetious soft-ware for 'standard' informational data bases. Programmers will still be needed to create customized or analytical software. The major emphasis of the AUTO-SYSTEM is on data base independence. The AUTO-SYSTEM was designed to be run on a 'WANG' 2200 T/C/VP or the 2200 WCS series CENTRAL PROCESSING UNIT (CPU) with a 32 K core. This system is disk operated and must have either a 2230 series disk (5 mega-bytes) or a 2260 series disk (10 mega-bytes). A 2270 series disk (a 1/2/3 drive floppy-diskette) may be integrated into the system for use as the system disk. It is also desirable that a 132 character, per line, high speed printer be available for outputting data. The major purpose of this manual is to introduce the AUTO-SYSTEM to managers, programmers and operators. Within the past fifteen years not only many private schools but also hundreds of public schools have undertaken to prepare men for employment as repairmen or to take care of their own automobiles. The author was for a number of years connected with both public and private schools which were attempting to give this training in automotive repair. In this book the emphasis is placed upon repair jobs rather than upon theory of design, or detailed types of construction. Automotive principles are relatively few in number, while the methods of application by manufacturers are numerous. The text in Part One covers the principal repair jobs which the general repairman or owner will be called upon to perform. Part Two covers the elementary principles of construction and operation, a knowledge of which is needed by the repairman and the owner so as to thoroughly understand automotive equipment. Acknowledgment is made to the Rahe Auto and Tractor School of Kansas City, Mo., for its cooperation in the analysis of the general repairman's job and to the following instructors in this school for their assistance: Mr. Holderman on the chassis, Mr. Lloyd on engine work, Mr. Thurman, Mr. Nicholas, Mr. Fines, and Mr. Spaulding on electrical repair, .Mr. Miller on trouble shooting, and Mr. Harper on body and radiator work. The assistance of the above instructors in the Rahe School was valuable in classifying the repair jobs and in setting up the operations. The author is further indebted to a number of manufacturing firms for permission to use cuts, drawings, and instructional notes.
