A MYSTERY OF HEROISM

Harper Collins Though best known for *The Red Badge of Courage*, his classic novel of men at war, in his tragically brief life and career Stephen Crane produced a wealth of stories—among them "The Monster," "The Upturned Face," "The Open Boat," and the title story—that stand among the most acclaimed and enduring in the history of American fiction. This superb volume collects stories of unique power and variety in which impressionistic, hallucinatory, and realistic situations alike are brilliantly conveyed through the cold, sometimes brutal irony of Crane's narrative voice.

BASIC MARKETING

A MARKETING STRATEGY PLANNING APPROACH

McGraw-Hill/Irwin Basic Marketing 16e builds on the foundation pillars of previous editions - the four Ps framework, managerial orientation, and strategy planning focus. 16e builds upon its pioneering beginnings that introduced the "four Ps" to the introductory marketing course. The unifying focus of Basic Marketing has always been on how to make the marketing decisions that a manager must make in deciding what customers to focus on and how best to meet their needs. Over many editions there has been constant change in marketing management and the marketing environment. Some of the changes have been dramatic, and others have been subtle. As a result, the authors have made ongoing changes to the text to reflect marketing's best practices and ideas. Throughout all of these changes, Basic Marketing and the supporting materials that accompany it have been more widely used than any other teaching materials for introductory marketing. Consistent with our belief in continuous quality improvement, this edition has been critically revised,

updated, and rewritten to reflect new concepts, new examples, and recent “best practices.” This edition extends the strategy planning approach, integrating concepts tightly with the marketing strategy planning model.

DIVINE STORIES

DIVYAVADANA

Simon and Schuster *Divine Stories* is the inaugural volume in a landmark translation series devoted to making the wealth of classical Indian Buddhism accessible to modern readers. The stories here, among the first texts to be inscribed by Buddhists, highlight the moral economy of karma, illustrating how gestures of faith, especially offerings, can bring the reward of future happiness and ultimate liberation. Originally contained in the *Divyavadana*, an enormous compendium of Sanskrit Buddhist narratives from the early Common Era, the stories in this collection express the moral and ethical impulses of Indian Buddhist thought and are a testament to the historical and social power of narrative. Long believed by followers to be the actual words of the Buddha himself, these divine stories are without a doubt some of the most influential stories in the history of Buddhism.

THE ART OF CHILDREN'S PORTRAIT PHOTOGRAPHY

Amherst Media Contemporary photographs that cleverly capture a child's mood or personality--whether that's a big, toothy grin or a teary tantrum--are easily created with the tips and techniques explored in this in-depth handbook. Often called "lifestyle photography," modern techniques such as tightly cropped close-ups, vignettes, wide angles, and shallow depths produce images that are markedly less stiff and more expressive than

traditional portraiture. From capturing great expressions and body language to integrating meaningful locations into the shoot to further express the subject's personality, this guide thoroughly explains how photographers can develop their image-storytelling skills to develop stunning portraits. Advice on creating platinum and chocolate-hued prints, vibrant color scenes, dramatic black & whites, and utilizing unusual textures or effects is also included.

CELL CYCLE IN DEVELOPMENT

Springer Science & Business Media This book focuses on the intersection between cell cycle regulation and embryo development. Specific modifications of the canonical cell cycle occur throughout the whole period of development and are adapted to fulfil functions coded by the developmental program. Deciphering these adaptations is essential to comprehending how living organisms develop. The aim of this book is to review the best-known modifications and adaptations of the cell cycle during development. The first chapters cover the general problems of how the cell cycle evolves, while consecutive chapters guide readers through the plethora of such phenomena. The book closes with a description of specific changes in the cell cycle of neurons in the senescent human brain. Taken together, the chapters present a panorama of species - from worms to humans - and of developmental stages - from unfertilized oocyte to aged adult.
