Yet libertarianism has been so strongly identified with Nozick's version of it that little attention has been devoted to other than Nozick's ideas and arguments. While Nozick's version of libertarianism has preoccupied the academic discussion Nozick himself did not respond to the many criticisms raised and yet other defenders of libertarianism have not remained silent. Jan Narveson, Loren Lomasky, Eric Mack, Douglas Rasmussen, Douglas Den Uyl and many others have contributed impressive arguments of their own in support of the libertarian idea that a political system is just when it successfully secures the rights of individuals understood within the Lockean classical liberal tradition. In this book Tibor R. Machan analyses the state of the debate on libertarianism post Nozick. Going far beyond the often cursory treatment of libertarianism in major books and other publications he examines closely the alternative non-Nozickian defenses of libertarianism that have been advanced and, by applying these arguments to innumerable policy areas in the field, Machan achieves a new visibility and prominence for libertarianism. **Semiconductor Electrochemistry** *John Wiley & Sons* Providing both an introduction and an up-to-date survey of the entire field, this text captivates the reader with its clear style and inspiring, yet solid presentation. The significantly expanded second edition of this milestone work is supplemented by a completely new chapter on the hot topic of nanoparticles and includes the latest insights into the deposition of dye layers on semiconductor electrodes. In his monograph, the acknowledged expert Professor Memming primarily addresses physical and electrochemists, but materials scientists, physicists, and engineers dealing with semiconductor technology and its applications will also benefit greatly from the contents. **Engine Tribology** *Elsevier* Customer expectations and international competition are obliging car and commercial vehicle manufacturers to produce more efficient and cleaner products in shorter product cycle times. This volume gives a detailed and current review on some basic features of tribology particularly associated with internal combustion engines such as: lubrication analysis relevant to plain bearings, Hertzian contact theory and elastohydrodynamic lubrication associated with cams and followers and friction and wear in a general context. Several chapters examine engine bearings, valve trains, (cams and followers) and piston assemblies. For each machine element a background introduction is followed by design interpretations and a consideration of future developments. The important topic of materials, solids and lubricants is focused upon in the concluding chapters. The work will be of interest to engineers and researchers in the automobile, automotive products, petroleum and associated industries. **Nanomaterials and Nanocomposites Characterization, Processing, and Applications** *CRC Press* Nanomaterials and Nanocomposites: Characterization, Processing, and Applications discusses the most recent research in nanomaterials and nanocomposites for a range of applications as well as modern characterization tools and techniques.
