Routledge French Technical Dictionary Dictionnaire technique anglais

Volume 2 English-French/anglais-francais

Routledge The French-English volume of this highly acclaimed set consists of some 100,000 keywords in both French and English, drawn from the whole range of modern applied science and technical terminology. Covers over 70 subject areas, from engineering and chemistry to packaging, transportation, data processing and much more.

Suppressed Inventions and Other Discoveries

Revealing the World's Greatest Secrets of Science and Medicine

Penguin A scientist with a revolutionary cure for AIDS is incarcerated without explanation. Valuable artifacts are mysteriously misplaced by a prominent archaeological institution. Three celebrated astronauts perish in a suspicious fire after voicing their criticism of the US space program. Yet our world's most powerful agencies hastily dispel these alarming reports as conspiracy theories, and bury them in padlocked archives. The fact is that a suppression syndrome exists in our society. Suppressed Inventions and Other Discoveries exposes the startling degree of truth behind the rumors. Jonathan Eisen has collected over forty intriguing stories of scientific cover-ups and programs of misinformation concocted to conceal some of the most phenomenal innovations in mankind's history. These no-holds-barred accounts force us to confront the naiveté—and danger—of trusting our academic and political leaders to act always for the common good. Suppressed Inventions and Other Discoveries presents documented evidence that corporate self-interest, scientific arrogance, and political savvy have contrived to keep us in the dark about technological breakthroughs or interplanetary contact that may shift the current balance of power. Prepare yourself

for a revealing look at the research and development to which we've been denied access. **Suppressed Inventions and Other Discoveries** begins by examining the ties that bind the medical establishment to powerful pharmaceutical corporations. Then it details the struggle of the independent research against Orthodox Science and its code of conduct, the Scientific Method. Next, the book investigates the cover-up of information concerning UFOs and extraterrestrial life that's certain to make you reconsider what you thought was science fiction. The final section discusses just a few of the numerous alternate energy resources and fuel savers that, if put on the market today, would soon run the fossil fuel monopolies out of business.

Wild Talents

Baen Publishing Enterprises Features an introductory essay by Jack Womack! Welcome to the worlds of Charles Fort, chronicler of the odd, the weird, the strange, the unexpected, and the inexplicable. In words at times as beautiful as anything ever written in English, Fort reveals the marvels of an age, questions the nature of what we think we know for certain, and provides the reader with leads on how not to be fooled by shaggy dog stories. Here you'll find rains of the unexpected, fish, snakes, and other items from the _super-Sargasso sea of the unexplained that circles the Earth. Here are accounts of UFOs, accounts of odd animals seen at sea or on land, mysterious attacks by what appear to have been animals, mysterious appearances of things and people in places they could not be. Here Fort's epic account of spontaneous combustion, lights in the sky, poltergeists, unseen. murderous wild animals, mysterious disappearances, manifestations of psychotic mania, speaking in tongues^{3/4}and, of course, the cow that gave birth to two lambs. All of this Fortean wonder is prefaced by a magnificent new introductory essay by Jack Womack, winner of the Philip K. Dick Award and lifetime Fortean. This Ebook is part of the Baen Books Charles Fort Ebook Collection At the publisher's request, this title is sold without DRM (Digital Rights Management).

Practical Engineer

Rigel's Escape

Tom Bielawski Heck Thomas has infiltrated Rigel's Escape, the mysterious drift in the Outer System, in the hope of finding Dr. William Connor and the rest of the system's missing scientists. The story takes a number of shocking twists as Heck battles to expose an insidious alliance, save the missing scientists, and keep the Centaurus Device from falling into the wrong hands.

Solaris Soars

Janet McNulty The final book in the Solaris Saga. Every legend has an end. Wounded and dependent upon Klanor for help, and pursued by the FBI and Stein, Rynah treks across the New Mexican desert in search of Solaris and the others. Knowing that they are following a lead from the ancient poem, she and Klanor make their way to Albuquerque to rendezvous with them. But Stein isn't Rynah's only worry; the president of the United States has issued an order to kill her on sight. Exhausted by Stein's constant pursuit of her and the FBI's complicit aid to him, Rynah and her crew resolve to take the fight to him and end his annihilation of Earth. While devising their plan, she discovers a secret Marlow kept from Solaris—her world and ours have been connected for thousands of years.

The London Gazette

Seventh Child

Elsewhen Press September Weekes is accustomed to teasing and bullying because of her white hair, tubby figure and silly name, but the discovery of a clear, smooth stone at her home casts her into a struggle between good and evil that will present her with sterner challenges. The stone takes her to Gwlad, the Land, where the people hail her as the Cludydd o Maengolauseren, the bearer of the starstone, with the power to defend them against the evil known as the Malevolence. September meets the leader of the people and the bearers of the seven metals linked to the seven 'planets'. Each metal gives the bearer specialised powers to resist the manifestations of the Malevolence; manifestations such as the comets known as Draig tân, fire dragons. She returns to her home, but is drawn back to the Land a fortnight later to find that two years have passed and the villagers have experienced more destructive attacks by manifestations. September must now help defend Gwlad against the Malevolence. Seventh Child is the first volume in a thrilling new fantasy series, Evil Above the Stars, by Peter R. Ellis, that will appeal to anyone who likes fantasy, especially fans of JRR Tolkien and Stephen Donaldson. If old theories are correct until a new idea comes along, does the universe change with our perception of it? Were the ideas embodied in alchemy ever right? What was the basis of Celtic mythology? Although ostensibly a fantasy for young adults, it is can just as easily be seen as science fiction, and will appeal to readers of all ages.

The Air Engine

Stirling Cycle Power for a Sustainable Future

Elsevier Two centuries after the original invention, the Stirling engine is now a commercial reality as the core component of domestic CHP (combined heat and power) - a technology offering substantial savings in raw energy utilization relative to centralized power generation. The threat of climate change requires a net reduction in hydrocarbon consumption and in emissions of 'greenhouse' gases whilst sustaining economic growth. Development of technologies such as CHP addresses both these needs. Meeting the challenge involves addressing a range of issues: a long-standing mismatch between inherently favourable internal efficiency and wasteful external heating provision; a dearth of heat transfer and flow data appropriate to the task of first-principles design; the limited rpm capability when operating with air (and nitrogen) as working fluid. All of these matters are explored in depth in The air engine: Stirling cycle power for a sustainable future. The account includes previously unpublished insights into the personality and potential of two related regenerative prime movers - the pressure-wave and thermal-lag engines. Contains previously unpublished insights into the pressure-wave and thermal-lag engines Deals with a technology offering scope for saving energy and reducing harmful emissions without compromising economic growth Identifies and discusses issues of design and their implementation

Zane Grey's Wild West

A Study of 31 Novels

McFarland This is a literary discussion of one-half of Zane Grey's Westerns, selected to best show the broad scope of this popular author's interests in the West. The text explains how these novels "work," while pointing out Grey's ecological concern for the natural world—its vastness, color and beauty. Wild nature provides a powerful setting but is

a determinant of action and of character too. The range of subjects encompasses not only cowboys but also prospectors, foresters and other frontiersmen, from the end of the Revolutionary War to the flapper era of the 1920s. World War I veterans, including an American Indian, are portrayed in several books, and women are colorful main protagonists in others, all uniquely characterized. Grey's sure ear for dialogue is key to his vivid presentation of the ideals of the Old West.

Modeling and Simulation of Turbulent Combustion

Springer This book presents a comprehensive review of state-of-the-art models for turbulent combustion, with special emphasis on the theory, development and applications of combustion models in practical combustion systems. It simplifies the complex multi-scale and nonlinear interaction between chemistry and turbulence to allow a broader audience to understand the modeling and numerical simulations of turbulent combustion, which remains at the forefront of research due to its industrial relevance. Further, the book provides a holistic view by covering a diverse range of basic and advanced topics—from the fundamentals of turbulence-chemistry interactions, role of high-performance computing in combustion simulations, and optimization and reduction techniques for chemical kinetics, to state-of-the-art modeling strategies for turbulent premixed and nonpremixed combustion and their applications in engineering contexts.

Analysis of Turbulent Flow and Heat Transfer on a Flat Plate at High Mach Numbers with Variable Fluid Properties

A previous analysis of turbulent heat transfer and flow with variable fluid properties in smooth passages is extended to flow over a flat plate at high Mach numbers. Velocity and temperature distributions are calculated for a boundary layer in which the effects of both frictional heating and external heat transfer are appreciable. The viscosity and thermal conductivity are assumed to vary as a power of the temperature, while the Prandtl number and specific heat are taken as constant. Skin-friction and heat-transfer coefficients are calculated and compared with the incompressible values. The relation between boundary-layer thickness and distance along the plate is obtained for various Mach numbers. The analytical results are compared with representative experimental data.
