Nietzsche's Psychology of Ressentiment

Revenge and Justice in "On the Genealogy of Morals"

Routledge *Ressentiment—the hateful desire for revenge—plays a pivotal role in Nietzsche's On the Genealogy of Morals. Ressentiment explains the formation of bad conscience, guilt, asceticism, and, most importantly, it motivates the "slave revolt" that gives rise to Western morality's values. Ressentiment, however, has not enjoyed a thorough treatment in the secondary literature. This book brings it sharply into focus and provides the first detailed examination of Nietzsche's psychology of ressentiment. Unlike other books on the Genealogy, it uses ressentiment as a key to the Genealogy and focuses on the intriguing relationship between ressentiment and justice. It shows how ressentiment, despite its blindness to justice, gives rise to moral justice—the central target of Nietzsche's critique. This critique notwithstanding, the Genealogy shows Nietzsche's enduring commitment to the virtue of non-moral justice: a commitment that grounds his provocative view that moral justice spells the 'end of justice'. The result provides a novel view of Nietzsche's moral psychology in the Genealogy, his critique of morality, and his views on justice.*

The Inner Consciousness

Createspace Independent Publishing Platform *Excerpt: It is now known that "Inner-Conscious" ideas, impressions and thoughts play a most important part in the thought-world of every individual. Beyond every outer-conscious action there may be found a vast inner-conscious background. It is held that of our entire mental processes, less than ten per cent are performed in the field of outer-consciousness. As a well-known writer has so well expressed it: "Our self is greater than we know; it has peaks above and lowlands below the plateau of our conscious experience." Prof. Elmer Gates has forcibly put it; "At least ninety per cent of our mental life is sub-conscious. If you will analyze your mental operations you will find that conscious thinking is never a continuous line of consciousness, but a series of conscious data with great intervals of sub-consciousness. We sit and try to solve a problem and fail. We walk around, try again and fail. Suddenly an idea dawns that leads to a solution of the problem. The sub-conscious processes were at work. We do not volitionally create our own thinking. It takes place in us. We are more or less passive recipients. We cannot change the nature of a thought, or of a truth, but we can, as it were, guide the ship by a moving of the helm." But, perhaps, the most beautiful expression of this underlying truth, is that of Sir Oliver Lodge, who says in his consideration of the subject: "Imagine an iceberg glorying in its crisp solidity, and sparkling pinnacles, resenting attention paid to its submerged self, or supporting region, or to the saline liquid out of which it arose, and into which in due course it will someday return. Or, reversing the metaphor, we may liken our present state to that of the hull of a ship submerged in a dim ocean among strange monsters, propelled in a blind manner through space; proud perhaps of accumulating many barnacles of decoration; only recognizing our destination by bumping against the dock-wall; and with no cognizance of the deck and cabins above us, or the spars and sails-no thought of the sextant, and the compass, and the captain-no perception of the look-out on the mast-of the distant horizon. With no vision of objects far ahead-dangers to be avoided-destinations to be reached-other ships to be spoken to by means other than by bodily contact-a region of sunshine and cloud, of space, or perception, and of intelligence utterly inaccessible below the waterline."*

Multivariable Calculus

Pearson College Division *This much anticipated second edition of the most successful new calculus text published in the last two decades retains the best of the first edition while introducing important advances and refinements. Authors Briggs, Cochran, and Gillett build from a foundation of meticulously crafted exercise sets, then draw students into the narrative through writing that reflects the voice of the instructor, examples that are stepped out and thoughtfully annotated, and figures that are designed to teach rather than simply supplement the narrative. The authors appeal to students' geometric intuition to introduce fundamental concepts, laying a foundation for the development that follows.
