NON-CHEMICAL WEED CONTROL

Academic Press Non-Chemical Weed Control is the first book to present an overview of plant crop protection against non-food plants using non-chemical means. Plants growing wild—particularly unwanted plants found in cultivated ground to the exclusion of the desired crop—have been treated with herbicides and chemical treatments in the past. As concern over environmental, food and consumer safety increases, research has turned to alternatives, including the use of cover crops, thermal treatments and biotechnology to reduce and eliminate unwanted plants. This book provides insight into existing and emerging alternative crop protection methods and includes lessons learned from past methodologies. As crop production resources decline while consumer concerns over safety increase, the effective control of weeds is imperative to insure the maximum possible levels of soil, sunlight and nutrients reach the crop plants. Allows reader to identify the most appropriate solution based on their individual use or case Provides researchers, students and growers with current concepts regarding the use of modern, environment-friendly weed control techniques Presents methods of weed management—an important part of integrated weed management in the future Exploits the knowledge gained from past sustainable weed management efforts

WILDLAND FIRE INCIDENT MANAGEMENT FIELD GUIDE

PMS-210

NWCG Training Branch The Wildland Fire Incident Management Field Guide is a revision of what used to be called the Fireline Handbook, PMS 410-1. This guide has been renamed because, over time, the original purpose of the Fireline Handbook had been replaced by the Incident Response Pocket Guide, PMS 461. As a result, this new guide is aimed at a different audience, and it was felt a new name was in order.

TREE FALLER'S MANUAL

TECHNIQUES FOR STANDARD AND COMPLEX TREE-FELLING OPERATIONS

CSIRO PUBLISHING The Tree Faller's Manual is an essential handbook for forest operators and others who need to fell trees manually using a hand-held chainsaw. This manual builds on the information provided by the Chainsaw Operator's Manual. Tree felling is a high risk activity. Many fatalities and serious injuries have occurred as a result of being struck by falling trees, dislodged tree limbs or other dangers in the area. Most of these accidents are caused by using unsafe felling techniques and not following safe work procedures. This manual will guide the faller to safer work techniques. The manual is based on the national competency standards for the forest and forest products industry where tree-felling is covered using three categories: basic, intermediate and advanced. Basic tree felling applies to trees that are relatively small, with a single stem and no defects. Intermediate tree felling covers trees with single or multiple stems, limited defects, and lean and weight distribution that can be adapted to felling direction. Advanced tree felling applies to larger and more complex trees and includes trees deemed to be more hazardous. Workplace safety, risk assessment and site preparation are included along with the theory, techniques and tools for each of the tree-felling categories.

CHAINSAW LUMBERMAKING

Once you're familiar with Will Malloff's method of chainsaw lumbermaking, you'll be simply and economically turning trees into lumber on your own Learn how to select the tree you want, fell it safely, and saw it into a fine pile of building or cabinet lumber. With detailed instructions and over 400 photographs, Will Malloff tells you everything you need to know to turn a chainsaw into a lumbermill, including how to: Modify the chainsaw and make numerous accessories for milling Use the equipment in the woods Grind a smooth-cutting ripping chain Build your own mill from a 2 x 4 and scraps of plywood Cut burls, shape ovals and mill natural knees for boatbuilding Malloff's method is the fruit of over 30 years' experience of felling trees and making lumber. He's logged everything from giant redwoods to desert mesquite and fulfilled his youthful ambition to fell timber in every major forest of North America. Drawing on this experience, he has invented several chainsaw mills, and perfected the easy, efficient method of chainsaw lumbermaking that he describes in this book. If you've ever had trouble finding the lumber you need, or wanted to build something with your own trees, "Chainsaw Lumbermaking" is the book you've been waiting for. Will Malloff has built a variety of mills and is the designer of what many consider the most effective chainsaw lumbermaking system available. Malloff has spent nearly half a century researching and developing tools and wood technology that minimize ecological impact. In an endeavor to build his own blacksmith shop on a Canadian Pacific island, he invented a state-of-the-art ripping chain, which made chainsaw lumbermaking more feasible and economical than ever before.

RURAL RESEARCH

RADAR INSTRUCTION MANUAL

Since 1958 the Maritime Administration has continuously conducted instructions in use of collision avoidance radar for qualified U.S. seafaring personnel and representatives of interested Federal and State Agencies. Beginning in 1963, to facilitate the expansion of training capabilities and at the same time to provide the most modern techniques in training methods, radar simulators were installed in Maritime Administration's three region schools. It soon became apparent that to properly instruct the trainees, even with the advanced equipment, a standardize up-to-date instruction manual was needed. The first manual was later revised to serve both as a classroom textbook and as an onboard reference handbook. This newly updated manual, the fourth revision, in keeping with Maritime Administration policy, has been restructured to include improved and more effective methods of plotting techniques for use in Ocean, Great Lakes, Coastwise and Inland Waters navigation. NORWAY SPRUCE CONVERSION - OPTIONS AND CONSEQUENCES

European Forest Institute Rese Up to the end of the 19th century, many European forests suffered from devastation and soil deterioration, which caused fears of timber shortage. In order to counteract this possible shortage, many forest areas were reforested with coniferous tree species, especially Norway spruce (*Picea abies* [L.] Karst). Consequently, coniferous forests (often Norway spruce forests), consisting of trees of the same age, were established on many sites naturally dominated by broadleaves. As a result, damages caused by storm, snow, ice, drought, insects, fungi and possibly soil degradation seemed to occur more frequently in these secondary Norway spruce forests than in forests consisting of species

better adapted to the ambient conditions. Conversion of Norway spruce stands may reduce these risks and upgrade biodiversity and the genetic potential of forests. As the economic results of forestry, future wood markets and various other goods and services that are provided to society by forest ecosystems, are affected by present and future decision-making, all aspects of conversion must be well understood. EFI's Regional Project Centre, CONFOREST, is continuously striving to improve implementation of conversion projects by consolidation of the expertise available in all forestry disciplines. This book comprises the findings in all conversion-related areas aiming to consider ecosystem needs while ensuring availability of silvicultural methods and operational feasibility of their implementation. Simultaneously, the cost-effectiveness of conversion scenarios is analysed by forestry economists. Since a change in public perception and ecological awareness may cause policy makers to either or not endorse further conversion efforts, input by experts in forestry politics is also provided.
