Become an App Inventor: The Official Guide from MIT App Inventor

Your Guide to Designing, Building, and Sharing Apps

Candlewick Press With a foreword by Gitanjali Rao, Time Magazine's inaugural Kid of the Year, this engaging guide from MITeen Press teaches anyone to design and publish their own apps—no experience necessary!—and introduces young app creators from around the world. Have you ever wanted to build your own mobile apps? App Inventor, a free and revolutionary online program from MIT, lets you do just that. With the help of this companion guide chock-full of colorful graphics and easy-to-follow instructions, readers can learn how to create six different apps, including a working piano, a maze game, and even their own chat app to communicate with friends—then use what they've learned to build apps of their own imagination. User-friendly code blocks that snap together allow even beginners to quickly create working apps. Readers will also learn about young inventors already using their own apps to make a difference in their communities, such as the girls from Moldova whose app helps alert residents when local well water is contaminated. Or the boys from Malden, Massachusetts, whose app lets users geotag potholes to alert city hall when repairs are needed. With this inspiring guide, curious young dreamers can become real inventors with real-world impact.

Scalable Innovation

A Guide for Inventors, Entrepreneurs, and IP Professionals

CRC Press Innovation is a primary source of economic growth, and yet only one idea out of 3,000 becomes a successful product or service. Scalable Innovation: A Guide for Inventors, Entrepreneurs, and IP Professionals introduces a model for the innovation process, helping innovators to understand the nature and timing of opportunities and risks on the path to success. The authors apply systems thinking to discover real-life challenges, and provide tools for turning these challenges into

opportunities for practical, scalable innovation. The book is organized into four sections: Prologue exposes key barriers to creativity and innovation. It provides telling examples of how years in school and at work make us accept common wisdoms that are likely to hurt our chances to create or take advantage of breakthrough innovations. Section I introduces a system model for understanding technology and solving problems. It shows how to connect the model with real-life solutions, including their reflection in patents. Section II introduces tools for thinking outside the box, considers the role of luck in success of inventions, and presents tools for flexible thinking and imagination development. Section III discusses system dynamics, including how the elements of systems evolve, creating space for invention and scalable innovation. The authors illustrate this with case studies from various industries and technology areas. They analyze several landmark innovations in detail, revealing surprising and essential elements common to all of them. This book presents simple principles that form the foundation of successful innovation, enabling practitioners to anticipate and expedite the creation of value through the guided innovation process. It outlines the most common barriers in reasoning and false beliefs about innovation that impede practitioners from seeing problems in a new light and offers specific ways of dealing with these barriers. It also provides specific tools for quickly identifying essential present and missing elements of systems underpinning high-value problems and their proposed solutions, resulting in an accelerated innovation development and evaluation cycle.

Inventor Confidential

The Honest Guide to Profitable Inventing

HarperCollins Leadership The road to licensing a profitable, innovative product or technology is riddled with curves, holes, and rocky cliffs. The President of the United Inventors Association shows inventors, innovators, and makers a better path towards monetizing your creations and how to avoid the get-rich-quick scammers. Every year, hundreds of thousands of eager inventors around the globe spend millions of dollars seeking assistance from inventor service companies and individuals claiming to be experts in the innovation and licensing fields, though their actual success rates are poor in relation to the dollar amounts they charge. The reality is, according to Inventors' Digest™, while 78% of new inventors believe they will make over a million dollars with their inventions, less than 1% actually do. Marketers prey on this scenario for their own financial gain. In Inventor Confidential, inventor advocate Warren Tuttle tips the odds back in the inventor's favor, helping them: Gain a much broader picture of the many current challenges that inventors face these days. Understand the red flags to watch out for when individuals or companies charge up front for their coaching or help-to-market services. See how inventors can improve their odds of licensing success by following a thorough product development protocol, creating working prototypes, and filing U.S. patents. Get the insider perspective on how companies determine the quality of a product submission and if they want to work with the inventor. Learn the 30 steps to market if you want to go it alone. For anyone who has a great idea or invention and wants to monetize it but are not sure who to trust, Inventor Confidential will show them where to best spend their hard-earned money to maximize their odds for success.

San Francisco Inventor's Guide

The 5-Second Inventor

Dog Ear Publishing Countless great products have failed to show up on the market because the creators, average people with five-second flashes of inspiration, didn't know what to do with their ideas. The 5-Second Inventor gives these people a step-by-step guide through the process that professional developers use to produce and market products, but focuses on self-production. Ken Chuah uses his own experiences to help the beginning inventpreneur (an inventor/entrepreneur) with low-budget strategies, a unique screening test to pinpoint the best manufacturers, and an in-depth chapter on understanding Chinese culture for the outsourcing inventpreneur. The 5-Second Inventor streamlines the process of converting ideas into products, emphasizing self-production rather than licensing deals. A reader will learn to identify his or her idea's potential with market research pinpointing the potential product's target audience. For security during this and the development process, The 5-Second Inventor covers different types of patents, non-disclosure agreements, and other ways to protect intellectual property. For the production phase, it outlines strategies for minimizing the initial startup budget. This includes the pros and cons of overseas manufacturing and information for the inventpreneur who chooses an overseas manufacturing partner. Ken gives advice for working with different types of retail buyers, such as big chain stores or online retailers. The 5-Second Inventor gives guides for publicity, marketing, and methods of selling one's innovative product. Written in layman's terms for people new to the invention industry, The 5-Second Inventor is the perfect guide for beginning inventpreneurs."

This book also provides you with access to sample exam software, which simulates the actual exam, and a discount on taking the actual exam. This book will help you pass the Autodesk Inventor Certified User exam on the first try, so you can avoid repeatedly taking the exam and obtain your certification sooner. Practice Exam Software Included with your purchase of this book is practice exam software. The practice exam software is meant to simulate the actual Autodesk Inventor Certified User exam. It can be downloaded and run from any computer and it will get you familiar with the official exam and check your skills prior to taking the official exam. The practice exam software requires you to use Autodesk Inventor to perform actions in order to formulate the answer to questions, just like the actual exam.
