## Parentology

### Everything You Wanted to Know about the Science of Raising Children but Were Too Exhausted to Ask

**Simon and Schuster** An award-winning scientist offers his unorthodox approach to childrearing: "Parentology is brilliant, jaw-droppingly funny, and full of wisdom...bound to change your thinking about parenting and its conventions" (Amy Chua, author of *Battle Hymn of the Tiger Mother*). If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In *Parentology*, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. *Parentology* teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time.

### Building and Operating a Realistic Model Railway

### A Guide to Running a Layout Like an Actual Railway

**The Crowood Press** This informative book provides a step-by-step account of the construction, from scratch, of a model railway called Dovedale. The model is operated like a real modern railway and was built entirely by the author within a strict low budget, using, wherever possible, recycled materials. Moreover, Dovedale is based on a specific prototype that exists in Buxton in Derbyshire, where freight trains run into an interchange siding, the locomotive runs round the train and then departs to a different destination. Some model railways are operated somewhat chaotically and are characterized by frequent derailments and locomotives that stop arbitrarily. If you wish to move away from this kind of layout and construct a model railway that operates realistically and reflects more closely the way that railways actually work in the second decade of the 21st century, then this is the book for you. Whilst constantly emphasizing realistic operation, the book covers layout planning and construction, controllers, point motors, power supply, cables and connectors, ways of operating traffic flows, signalling, track droppers, control panels and wiring, control and interlocking, lighting, sequence and block bells, the use of closed circuit television, and much more. Superbly illustrated with 258 colour photographs and diagrams.

### Amelia Earhart's Final Flight

### On Amelia Earhart's Final Flight She Landed on Mili Atoll and Was Captured by the Japanese.

The Versailles Treaty after WWI "Mandated Islands" in the Pacific to the Japanese. President Roosevelt felt the Japanese were illegally installing military fortification on these "Mandated Islands" which was in direct violation of the WWI Treaty. Amelia Earhart, a popular female pilot who set many aviation records, wanted to increase her popularity by flying around-the-world. This would be a huge accomplishment that no pilot, man or woman, had attempted before. She left California, March 17, 1937, in a twin-engine Lockheed Electra and flew to Honolulu on the first leg of her historic flight with Fred Noonan and Harry Manning as her navigators. Unfortunately, she crashed on take-off and her Electra was so badly damaged, it had to be shipped back to the Lockheed plant in California for repairs. Amelia and her publisher husband, George Putnam didn't have the money to repair her Electra and make another attempt to fly around-the-world, so Mr. Putnam approached President Roosevelt and

asked if the U.S. government could help? FDR had met Amelia previously and knew of her plans to fly around-the-world. In 1937, FDR believed the Japanese were illegally preparing for war on "Mandated" islands in the Pacific. Marine Colonel Earl Ellis tried to sneak into Truk Atoll to gather information, but was caught on the island of Palau and killed. FDR believed that maybe a civilian pilot who was going to fly around-the-world might have a better chance to obtain the information he needed, so agreed to help Amelia on her request. But, FDR only did so, if Amelia would agree to take a few pictures of Japanese island fortifications along the way. Although a staunch 'pacifist' Amelia agreed to the president's stipulations. The U.S. government helped plan her second attempt, provided her plane with larger engines, installed additional fuel tanks and reconnaissance cameras, but did so with little fanfare or publicity. Instead of flying from East to West as she planned on her first attempt, she flew West to East with only Fred Noonan as her navigator. Prior to her flight it's reported she was sworn into the Army Air Force as an officer and confided to a friend, "Imagine me being a spy!" Amelia left California on May 21st and headed for Miami, Puerto Rico, Brazil, Africa, India, Bangkok, Singapore and Dutch East Indies, where Mr. F.O. Furman, a Lockheed maintenance specialist, met Amelia and checked her Electra and cameras for 3-days. At each stop, 55-gallon drums of fuel would be waiting for her, even if she flew into a field that was not on her announced itinerary. She and Fred Noonan left Lae, New Guinea on July 1st, 1937 and headed for Howland Island, 2,556 miles away. The Coast Guard Cutter ITASCA waited just off Howland to handle all communications as she approached. Unfortunately, when Harry Manning was the designated navigator on her first attempt, he arranged for Navy ships to communicate with her in Morse Code. No one told the Navy vessels that Manning was no longer her navigator. Neither Amelia or Fred could read Morse Code! Amelia Earhart's Final Flight tells the story of how she crashed on Mili Atoll in the Marshall Islands, was captured by the Japanese, taken to Saipan where she was held in prison for several years before being killed. Eye-witnesses in the Marshall Islands and on Saipan provided the true accounts of what actually happened to Amelia on her historic flight, what happened when she was captured, how she was killed and reaction by U.S. and Japanese leaders. It also relates how U.S. Marines found Amelia's briefcase and also found her Electra on Saipan when they attacked in 1944. David O'Malley, a member of the Writers Guild, wrote an interesting screenplay that's based on these eye-witness reports. It gives a rational explanation why both the U.S. and Japan have kept Amelia's capture and death a secrete since her Final Flight.

### United States National Park Service Maps from the Collection of Brian Kelley

A never-before-seen collection of United States National Park Service maps This book brings together a collection of over 400 maps produced by the United States National Park Service from 1910 to today. Photographer Brian Kelley has impulsively archived the rarely seen treasures over the past three years, uncovering a design portfolio with little to no credit to their respective designers. The growing collection displays a progressive design approach, from more typographic-driven covers, to the proliferation of duotone print production, culminating in the Unigrid system developed by Italian designer Massimo Vignelli in the 1970s.
