Saving Us

A Climate Scientist's Case for Hope and Healing in a Divided World

Simon and Schuster United Nations Champion of the Earth, climate scientist, and evangelical Christian Katharine Hayhoe changes the debate on how we can save our future in this nationally bestselling “optimistic view on why collective action is still possible—and how it can be realized” (The New York Times). Called “one of the nation’s most effective communicators on climate change” by The New York Times, Katharine Hayhoe knows how to navigate all sides of the conversation on our changing planet. A Canadian climate scientist living in Texas, she negotiates distrust of data, indifference to imminent threats, and resistance to proposed solutions with ease. Over the past fifteen years Hayhoe has found that the most important thing we can do to address climate change is talk about it—and she wants to teach you how. In Saving Us, Hayhoe argues that when it comes to changing hearts and minds, facts are only one part of the equation. We need to find shared values in order to connect our unique identities to collective action. This is not another doomsday narrative about a planet on fire. It is a multilayered look at science, faith, and human psychology, from an icon in her field—recently named chief scientist at The Nature Conservancy. Drawing on interdisciplinary research and personal stories, Hayhoe shows that small conversations can have astonishing results. Saving Us leaves us with the tools to open a dialogue with your loved ones about how we all can play a role in pushing forward for change.

Communities in Action

Pathways to Health Equity

National Academies Press In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Deep California

Images and Ironies of Cross and Sword on El Camino Real

Craig Chalquist, PhD California has been invaded by three imperial powers: Spain, Mexico, and the United States. *Deep California* examines in depth the lingering psychological traumas and motifs emanating from that long history of conquest. These unhealed events have not been left in the past: they recur symbolically again and again, growing in intensity as the overbuilt land and its distracted occupiers unconsciously but definitively demonstrate that environmental justice and social justice can no longer be thought of as separate. Pacing crusaders and colonizers from county to county along El Camino Real, *Deep California* studies the lingering impact of continuous oppression of people and places as images and themes of displacement and exile filter down into architecture, agriculture, politics, art, culture, psychology, and even folklore and dream. Yet within the shadows cast over California also dwell resistance, humor, irony, tragedy, and hope for more heartfelt and soulful connections to this story-rich "land of the sundown sea." "History" is an inadequate term for such a sweeping and deep discovery of how the past informs the present. This work deserves to be read widely by all Californians and Americans, and taken to heart, and the hard lessons applied to all places we inhabit on this stolen land. -Lesley Thomas, author of *Flight of the Goose* (Far Eastern Press, 2005) "A monumental and much-needed study in depth of the conquest, occupation, traumatization, and animation of the mission cities and counties of coastal California, places which have worked their way into our unsuspecting psyches." -Linda Buzzell, MA, MFT, co-editor of *Ecotherapy: Healing with Nature in Mind* (Sierra Club Books, 2009)

The Role of Human Factors in Home Health Care

Workshop Summary

National Academies Press The rapid growth of home health care has raised many unsolved issues and will have consequences that are far too broad for any one group to analyze in their entirety. Yet a major influence on the safety, quality, and effectiveness of home health care will be the set of issues encompassed by the field of human factors research--the discipline of applying what is known about human capabilities and limitations to the design of products, processes, systems, and work environments. To address these challenges, the National Research Council began a multidisciplinary study to examine a diverse range of behavioral and human factors issues resulting from the increasing migration of medical devices, technologies, and care practices into the home. Its goal is to lay the groundwork for a thorough integration of human factors research with the design and implementation of home health care devices, technologies, and practices. On October 1 and 2, 2009, a group of human factors and other experts met to consider a diverse range of behavioral and human factors issues associated with the increasing migration of medical devices, technologies, and care practices into the home. This book is a summary of that workshop, representing the culmination of the first phase of the study.

Marginality and Condemnation, 3rd Edition

A Critical Introduction to Criminology

Fernwood Publishing **Includes test bank and PowerPoint slides for professors who have adopted the text in their course. Contact info@fernpub.ca for more information. ** This well-received criminology textbook, now in its third edition, argues that crime must be understood as both a social and a political phenomenon. Using this lens, *Marginality and Condemnation* contends that what is defined as criminal, how we respond to “crime” and why individuals behave in anti-social ways are often the result of individual and systemic social inequalities and disparities in power. Beginning with an overview of criminological discourse, mainstream approaches and new directions in criminological theory, the book is then divided into sections, based on key social inequalities of class, gender, race and age, each of which begins with an outline of the general issues for understanding crime and an introduction that guides readers through the empirical chapters that follow. The studies provide insights into general issues in criminology, ranging from the historical and current nature of crime and criminal justice to the various responses to criminality. Readers are encouraged and challenged to understand crime and justice through concrete analyses rather than abstract argumentation. In addition to a new introductory chapter that confronts how we define crime, measure crime, and understand and use criminology in this millennium, the third edition provides new chapters examining crime in relation to the environment, terrorism, masculinity, children and youth, and Aboriginal gangs and the legacy of colonialism.

Canadian Social Policy, Fifth Edition

Issues and Perspectives

Wilfrid Laurier Univ. Press Social policy shapes the daily lives of every Canadian citizen and should reflect the beliefs of a majority of Canadians on just approaches to the promotion of health, safety, and well-being. Too often, those on the front lines—social workers, nurses, and teachers—observe that policies do not work well for the most vulnerable groups in society. In the first part of this new edition of *Canadian Social Policy*, Westhues and Wharf argue that service deliverers have discretion in how policies are implemented, and the exercise of this discretion is how citizens experience policy—whether or not it is fair and reasonable. They show the reader how social policy is made and they encourage active citizenship to produce policies that are more socially just. New material includes an examination of the reproduction of systemic racism through the implementation of human rights policy and a comparative analysis of the policy-making process in Quebec and English Canada. The second part of the book discusses policy issues currently under debate in Canada. Included are new chapters that explore parental leave policies and housing as a determinant of health. All chapters contain newly updated statistical data and research and policy analysis. A reworked section on the process of policy-making and the addition of questions for critical reflection enhance the suitability of the book as a core resource in social policy courses. The final chapter explores how front-line workers in the human services can advocate for change in organizational policies that will benefit the people supported.
