The future of Inflight Entertainment in Europe, according to passenger expectations: Why Airlines should embrace Consumer Technology

diplom.de Consumerization - passengers toting their tablets, laptops, smartphones and e-readers on planes - has forced airlines to re-think. Should they continue to invest heavily into Inflight Entertainment (IFE) systems, or just concentrate on offering Wi-Fi and power in the cabin? The goal of this research was to define the IFE offer of the future. Four barriers that split the world into the three regions Europe, Asia and USA in terms of IFE development were identified: the cultural, the commercial, the technological and the legal barrier. This book focuses on Europe, which lags mostly behind with IFE out of these three regions. For example, as opposed to the US, no major European airline offers inflight Wi-Fi widely on its network, and in contrast to leading Middle Eastern airlines none offers inflight live TV or the usage of mobile phones without restriction, like on the ground. The target was to define IFE from a consumer perspective. To capture the latter the author evaluated consumer satisfaction methodologies and decided to go with the Kano approach, which categorizes alternatives of a product or service, in this case IFE, in must-be, attractive and indifferent elements. A representative online survey revealed movies and power to be must-be, TV and Wi-Fi to be attractive and the rest, e-books, music, games and duty free onboard, to be indifferent elements of IFE. The majority of people indicated that they would pay for movies and Wi-Fi but not for power supply, TV or other content. Differently said, content-wise passengers only insisted in the supply of movies, for the rest they expected the airline to provide Internet and power so they themselves could get the content. Further, sub-groups were analysed - people within the sample with mutual characteristics like gender, travel frequency or ownership of smart devices. So was music on a plane a must for women and owners of iPhones were more willing to pay for apps than others. Overall, country of residence, travel purpose (leisure or business) and flight duration (long vs. short haul) were the greatest dividers re IFE requirements.

Shelters, Shacks and Shanties

Library of Alexandria *Ê*If my present reader happens to be a Boy Scout or a scout-master who wants the scouts to build a tower for exhibition purposes, he can do so by following the directions here given, but if there is real necessity for haste in the erection of this tower, of course we cannot build one as tall as we might where we have more time. With a small tower all the joints may be quickly lashed together with strong, heavy twine, rope, or even wire; and in the wilderness it will probably be necessary to bind the joints with pliable roots, or cordage made of bark or withes; but as this is not a book on woodcraft we will suppose that the reader has secured the proper material for fastening the joints of the frame of this signal-tower and he must now shoulder his axe and go to the woods in order to secure the necessary timber. First let him cut eight straight polesÑthat is, as straight as he can find them. These poles should be about four and one half inches in diameter at their base and sixteen and one half feet long. After all the branches are trimmed off the poles, cut four more sticks each nine feet long and two and a half or three inches in diameter at the base; when these are trimmed into shape one will need twenty six or seven more stout

sticks each four and one half feet long for braces and for flooring for the platform.
