If you're like many parents, you might ask family and friends for advice when faced with important choices about how to raise your kids. You might turn to parenting books or simply rely on timeworn religious or cultural traditions. But when Dalton Conley, a dual-doctorate scientist and full-blown nerd, needed childrearing advice, he turned to scientific research to make the big decisions. In Parentology, Conley hilariously reports the results of those experiments, from bribing his kids to do math (since studies show conditional cash transfers improved educational and health outcomes for kids) to teaching them impulse control by giving them weird names (because evidence shows kids with unique names learn not to react when their peers tease them) to getting a vasectomy (because fewer kids in a family mean smarter kids). Conley encourages parents to draw on the latest data to rear children, if only because that level of engagement with kids will produce solid and happy ones. Ultimately these experiments are very loving, and the outcomes are redemptive—even when Conley's sassy kids show him the limits of his profession. Parentology teaches you everything you need to know about the latest literature on parenting—with lessons that go down easy. You'll be laughing and learning at the same time. **The Gourmet Cookbook More Than 1000 Recipes** [Houghton Mifflin Harcourt](#) Gathers recipes published in Gourmet magazine over the last six decades, including beef Wellington, seared salmon with balsamic glaze, and other entrées, hors d'oeuvres, side dishes, ethnic specialties, and desserts. **The Linux Command Line A Complete Introduction** [No Starch Press](#) You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to: * Create and delete files, directories, and symlinks * Administer your system, including networking, package installation, and process management * Use standard input and output, redirection, and pipelines * Edit files with Vi, the world's most popular text editor * Write shell scripts to automate common or boring tasks * Slice and dice text files with cut, paste, grep, patch, and sed Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. Featuring 60 artists, collaborations, and collectives, the exhibition is comprised of over 70 works across a variety of mediums, including painting, performance, photography, sculpture, video, web-based projects, and virtual reality. The exhibition is divided into five sections that explore themes such as emergent ideas of the body and notions of human enhancement; the internet as a site of both surveillance and resistance; the circulation and control of images and information; the possibilities for exploring identity and community afforded by virtual domains; and new economies of visibility accelerated by social media. Throughout, the work in the exhibition addresses the internet-age democratization of culture that comprises our current moment. The earliest work in the exhibition is from 1989, the year that Tim Berners-Lee invented the World Wide Web. This development, and others that followed in quick succession, modernized the internet, and in the process radically changed our way of life—from how we access and generate information, make friends and share experiences, to how we imagine our future bodies and how nations police national security. 1989 also marked a watershed moment across the globe, with significant shifts in politics, geographies, and economies. Events such as the fall of the Berlin Wall and protests in Tiananmen Square signaled the beginning of our current globalized age, which cannot be imagined without the internet. **Resource Manual for Airport In-terminal Concessions** [Transportation Research Board](#) **The Major Appliance Service National Price Guide** **MASPG Fuzzy Logic for the Applications to Complex Systems Proceedings of the International Joint Conference of CFSA/IFIS/SOFT '95 on Fuzzy Theory and Applications** [World Scientific](#) This volume presents an interesting mix of topics on complex systems such as information systems, engineering systems, fuzzy neural systems, image processing, robotics, fuzzy control, genetic algorithms, and fuzzy decision making. We explore the development of NFC technology in recent years, introduce the major stakeholders in the NFC ecosystem, and project its movement toward mainstream adoption. Several examples of early implementation of NFC in libraries are highlighted, primarily involving the use of NFC to enhance discovery by linking books or other physical objects with digital information about library resources, but also including applications of NFC to collection management and self-checkout. Future uses of NFC in libraries, such as smart posters or other enhanced outreach, are envisioned as well as the potential for the "touch paradigm" and "Internet of things" to transform the ways in which library users interact with the information environment. The WBCSD has 200 member companies with combined annual revenues of US\$7 trillion; the UN Global Compact has almost 8,000 corporate members, over two-thirds of them from developing countries. It is estimated that there are more than 110 national and international generalist business-led CR coalitions. But there is now urgent need for informed and balanced analysis of their achievements, their progress and their potential. Why did these coalitions start and grow? What have been their impacts? Where are they heading now? Where should they be going? What is the future? In a period of austerity, the business and public sector must decide whether funding these coalitions is a priority. To meet current crises, there will have to be a great deal more business involvement; but efforts of individual corporations will not be sufficient. There is also a need for far more collective action among companies and more collaborative action between different sectors of society. Business-led CR coalitions with their decades of convening experience could play an important role in this process - if they are fit for purpose going forward. Authors David Grayson and Jane Nelson have been actively involved in such coalitions for decades. In Corporate Responsibility Coalitions they first explore the past, present and future of these coalitions: the emergence of new models of collective corporate action over the past four decades; the current state of play, and the increasing number, diversity and complexity in terms of how they not only network with each other but also engage in a much broader universe of institutions that are promoting responsible business practices. In addition, the book provides in-depth profiles of the most strategic, effective and long-standing coalitions, including: Business for Social Responsibility; Business in the Community; CSR Europe; Instituto Ethos; International Business Leaders Forum; the UN Global Compact; and the WBCSD. This book will be required reading for key supporters and potential partners of such coalitions in companies, governments, international development agencies, foundations, non-governmental organizations, academic institutions and think-tanks. It also aims to inspire a future generation of leaders to be more aware of the role of business as a partner in driving more inclusive, green and responsible growth, and to help them develop new types of leadership skills so that they can be effective in finding multi-stakeholder solutions to complex and systemic challenges. **Popular Science** Popular Science gives our readers the information and tools to improve their technology and their world.
