## Mathematics and Multi-Ethnic Students Exemplary Practices

Taylor & Francis Mathematics and Multi-Ethnic Students provides detailed profiles of teachers across the nation who have implemented effective mathematics instruction for diverse student populations. In this revised edition, Yvelyne Germain-McCarthy expands upon the popular case studies and adds two new chapters to highlight the latest educational research and practices that are reflected in the case studies. A third new chapter introduces the concept of the Life-Long Learning Laboratory where courageous questions on issues such as the impact of race on student learning are discussed. Featuring useful framing tools including the Discussion with Colleagues and Commentary sections, Mathematics and Multi-Ethnic Students translates concrete instances of access and equity into generalized problem-solving methods for promoting ethnic diversity across grade levels. An important resource for pre-service and in-service educators, researchers, administrators, and policy makers, this volume highlights the work of teachers who have gone beyond mere awareness of reform recommendations in mathematics instruction. By uniting the goals of multicultural education with those of the mathematics curriculum, educators will learn to conceptualize and implement best practices for effective, equitable teaching and learning of mathematics for their students.

# Innovative Practices in Teacher Preparation and Graduate-Level Teacher Education Programs

IGI Global Educators play a significant role in the intellectual and social development of children and young adults. Thus, it is important for next-generation teachers to have a strong educational background, as it serves as the foundation to their understanding of learning processes, leadership, and best practices in the field of education. Innovative Practices in Teacher Preparation and Graduate-Level Teacher Education Programs presents critical and relevant research on methods by which future educators in high-level courses are equipped and instructed in order to promote the best experience in academic scholarship. Featuring discussion on a diverse assortment of topics, such as social justice for English language learners, field-based teacher education, and student satisfaction in graduate programs, this publication is directed at academicians, students, and researchers seeking modern research on the approaches taken by instructors to qualify and engage future educators.

## Business Math

Cengage Learning BUSINESS MATH, 17E provides comprehensive coverage of personal and business-related mathematics. In addition to reviewing the basic operations of arithmetic, students are prepared to understand and manage their personal finances, as well as grasp the fundamentals of business finances. BUSINESS MATH, 17E prepares students to be smart shoppers, informed taxpayers, and valued employees. Basic math skills are covered in a step-by-step manner, building confidence in users before they try it alone. Spreadsheet applications are available on the Data Activities CD, and a simulation activity begins every chapter. Chapters are organized into short lessons for ease of instruction and include algebra connections, group and class activities, communication skills, and career spotlights. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

## Discrete Mathematics

# An Open Introduction

Note: This is the 3rd edition. If you need the 2nd edition for a course you are taking, it can be found as a "other format" on amazon, or by searching its isbn: 1534970746 This gentle introduction to discrete mathematics is written for first and second year math majors, especially those who intend to teach. The text began as a set of lecture notes for the discrete mathematics course at the University of Northern Colorado. This course serves both as an introduction to topics in discrete math and as the "introduction to proof" course for math majors. The course is usually taught with a large amount of student inquiry, and this text is written to help facilitate this. Four main topics are covered: counting, sequences, logic, and graph theory. Along the way proofs are introduced, including proofs by contradiction, proofs by induction, and combinatorial proofs. The book contains over 470 exercises, including 275 with solutions and over 100 with hints. There are also Investigate! activities throughout the text to support active, inquiry based learning. While there are many fine discrete math textbooks available, this text has the following advantages: It is written to be used in an inquiry rich course. It is written to be used in a course for future math teachers. It is open source, with low cost print editions and free electronic editions. This third edition brings improved exposition, a new section on trees, and a bunch of new and improved exercises. For a complete list of changes, and to view the free electronic version of the text, visit the book's website at [discrete.openmathbooks.org](http://discrete.openmathbooks.org)

# Pedagogical Applications and Social Effects of Mobile Technology Integration

IGI Global With the rapid development of emerging technology tools, the digital nature of learning environments continues to change traditional forms of education. Therefore, knowledge of these changes for incorporation into classroom instruction is necessary. Pedagogical Applications and Social Effects of Mobile Technology Integration analyzes possible solutions over the concerns and issues surrounding mobile technology integration into the classroom. This book is an essential resource for professionals, researchers, and technology leaders interested in providing a direction for the future of classroom technology.

# Inclusion Strategies That Work!

## Research-Based Methods for the Classroom

Corwin Press Provides educators with details on the latest national mandates, including amendments to ADA and IDEIA, discussing response to intervention, and how to adapt teaching strategies and curriculum.

## Standards and Standardization: Concepts, Methodologies, Tools, and Applications

## Concepts, Methodologies, Tools, and Applications

IGI Global Effective communication requires a common language, a truth that applies to science and mathematics as much as it does to culture and conversation. Standards and Standardization: Concepts, Methodologies, Tools, and Applications addresses the necessity of a common system of measurement in all technical communications and endeavors, in addition to the need for common rules and guidelines for regulating such enterprises. This multivolume reference will be of practical and theoretical significance to researchers, scientists, engineers, teachers, and students in a wide array of disciplines.

## Working with Algebra Tiles

## Grades 6-12

"A complete resource for using algebra tiles to help students visualize algebra, build and solve equations, and gain comfort and skill with algebraic expressions. Teacher's notes and reproducible activities cover integer operations, linear expressions, quadratic expressions, perimeter, arrays, binomials and more. Each topic progresses through objective prerequisites, getting started and closing

the activity." -- (p.4) of cover.

## The World from Beginnings to 4000 BCE

Oxford University Press To be human is to be curious. And one of the things we are most curious about is how we came to be who we are--how we evolved over millions of years to become creatures capable of inquiring into our own evolution. In this lively and readable introduction, renowned anthropologist Ian Tattersall thoroughly examines both fossil and archaeological records to trace human evolution from the earliest beginnings of our zoological family, Hominidae, through the appearance of Homo sapiens to the Agricultural Revolution. He begins with an accessible overview of evolutionary theory and then explores the major turning points in human evolution: the emergence of the genus Homo, the advantages of bipedalism, the birth of the big brain and symbolic thinking, Paleolithic and Neolithic tool making, and finally the enormously consequential shift from hunter-gatherer to agricultural societies 10,000 years ago. Focusing particularly on the pattern of events and innovations in human biological and cultural evolution, Tattersall offers illuminating commentary on a wide range of topics, including the earliest known artistic expressions, ancient burial rites, the beginnings of language, the likely causes of Neanderthal extinction, the relationship between agriculture and Christianity, and the still unsolved mysteries of human consciousness. Complemented by a wealth of illustrations and written with the grace and accessibility for which Tattersall is widely admire, The World from Beginnings to 4000 BCE invites us to take a closer look at the strange and distant beings who, over the course of millions of years, would become us.

McGraw-Hill Education The Complete Classroom Set, Print & Digital includes: 30 print Student Editions 30 Student Learning Center subscriptions 1 print Teacher Edition 1 Teacher Lesson Center subscription

# The "People Power" Education Superbook: Book 6. Math & Science Guide

Lulu Press, Inc This is a book to help you quickly find the math and science information you're looking for at the library, on websites, through publishers who sell books and magazines, organizations, etc. Think of it as my attempt to organize a framework for the worlds of math and science.

## Take Control of Asperger's Syndrome

## The Official Strategy Guide for Teens With Asperger's Syndrome and Nonverbal Learning Disorder

Routledge A gifted education Legacy Award winner, Take Control of Asperger's Syndrome: The Official Strategy Guide for Teens With Asperger's Syndrome and Nonverbal Learning Disorder is a unique handbook for kids and teens on living successful lives with these disorders by taking control of their strengths to overcome their weaknesses. Drawing on their experiences as parents and teachers of students with Asperger's syndrome (AS) and Nonverbal Learning Disorder (NLD), the authors provide tips on understanding the disorders, living with the symptoms, succeeding in school, completing homework, talking to others about strengths and needs, making friends and socializing, and using technology to connect with other kids and teens with these disorders. By interviewing dozens of kids and teens who live with AS and NLD, the authors include ideas, information, and advice for students, by students just like them. This handy guidebook is sure to help any child or teen with AS or NLD navigate life's challenges with successful outcomes. Named one of the Pennsylvania State Librarians Association's Young Adult Top Forty nonfiction books of 2010. Ages 10-16

# Algebra and Trigonometry

"The text is suitable for a typical introductory algebra course, and was developed to be used flexibly. While the breadth of topics may go beyond what an instructor would cover, the modular approach and the richness of content ensures that the book meets the needs of a variety of programs."--Page 1.

# The Simpsons and Their Mathematical Secrets

A&C Black You may have watched hundreds of episodes of The Simpsons (and its sister show Futurama) without ever realising that they contain enough maths to form an entire university course. In The Simpsons and Their Mathematical Secrets, Simon Singh explains how the brilliant writers, some of the mathematicians, have smuggled in mathematical jokes throughout the cartoon's twenty-five year history, exploring everything from Mersenne primes, from Euler's equation to the unsolved riddle of P vs. NP, from perfect numbers to narcissistic numbers, and much more. With wit, clarity and a true fan's zeal, Singh analyses such memorable episodes as 'Bart the Genius' and 'Homer3' to offer an entirely new insight into the most successful show in television history.

# Integrated Math, Course 2, Student Edition

McGraw-Hill Education Includes: Print Student Edition

# Basic Probability Theory

Courier Corporation This introduction to more advanced courses in probability and real analysis emphasizes the probabilistic way of thinking, rather than measure-theoretic concepts. Geared toward advanced undergraduates and graduate students, its sole prerequisite is calculus. Taking statistics as its major field of application, the text opens with a review of basic concepts, advancing to surveys of random variables, the properties of expectation, conditional probability and expectation, and characteristic functions. Subsequent topics include infinite sequences of random variables, Markov chains, and an introduction to statistics. Complete solutions to some of the problems appear at the end of the book.

# Teach Like Your Hair's on Fire

## The Methods and Madness Inside Room 56

Penguin Read Rafe Esquith's posts on the Penguin Blog. The New York Times bestseller that is revolutionizing the way Americans educate their kids-"Rafe Esquith is a genius and a saint" (The New York Times) Perhaps the most famous fifth-grade teacher in America, Rafe Esquith has won numerous awards and even honorary citizenship in the British Empire for his outstandingly successful methods. In his Los Angeles public school classroom, he helps impoverished immigrant children understand Shakespeare, play Vivaldi, and become happy, self-confident people. This bestseller gives any teacher or parent all the techniques, exercises, and innovations that have made its author an educational icon, from personal codes of behavior to tips on tackling literature and algebra. The result is a powerful book for anyone concerned about the future of our children.

## What Every Real Estate Investor Needs to Know About Cash Flow... And 36 Other Key Financial Measures, Updated Edition

McGraw Hill Professional The Classic Guide to Real Estate Investing—Updated for a Re-energized Industry! Real estate is once again a great investment, and this bestselling guide provides everything you need to know to get in now and make your fortune. What Every Real Estate Investor Needs to Know About Cash Flow removes the guesswork from investing in real estate by teaching you how to crunch numbers like a pro, so you can confidently judge a property's value and ensure it provides long-term returns. Real estate expert, Frank Gallinelli has added new, detailed investment case studies, while maintaining the essentials that have made his book a staple among serious investors. Learn how to measure critical aspects of real estate investments, including: Discounted Cash Flow Net Present Value Capitalization Rate Cash-on-Cash Return Net Operating Income Internal Rate of Return Profitability Index Return on Equity Whether you're just beginning in real estate investing or you're a seasoned professional, What Every Real Estate Investor Needs to Know About Cash Flow has what you need to make sure you take the smartest approach for your next investment using

proven calculations.

## Single Variable Calculus

## Early Transcendentals

Jones & Bartlett Learning Dennis Zill's mathematics texts are renowned for their student-friendly presentation and robust examples and problem sets. The Fourth Edition of Single Variable Calculus: Early Transcendentals is no exception. This outstanding revision incorporates all of the exceptional learning tools that have made Zill's texts a resounding success. Appropriate for the first two terms in the college calculus sequence, students are provided with a solid foundation in important mathematical concepts and problem solving skills, while maintaining the level of rigor expected of a Calculus course.

## Thinking Mathematically

Pearson College Division 'Thinking Mathematically' seeks to turn this familiar statement into a promise of opportunity and exploration. The examples provided offer both a contextual and procedural base that students can easily build upon.

## Subtracting Fractions

Remedia Publications

## Euclid in the Rainforest

## Discovering Universal Truth in Logic and Math

Penguin Like Douglas Hofstadter's Gödel, Escher, Bach, and David Berlinski's A Tour of the Calculus, Euclid in the Rainforest combines the literary with the mathematical to explore logic—the one indispensable tool in man's quest to understand the world. Underpinning both math and science, it is the foundation of every major advancement in knowledge since the time of the ancient Greeks. Through

adventure stories and historical narratives populated with a rich and quirky cast of characters, Mazur artfully reveals the less-than-airtight nature of logic and the muddled relationship between math and the real world. Ultimately, Mazur argues, logical reasoning is not purely robotic. At its most basic level, it is a creative process guided by our intuitions and beliefs about the world.

## Introduction to Programming Using Java

Orange Grove Text Plus

## Precalculus

"Precalculus is intended for college-level precalculus students. Since precalculus courses vary from one institution to the next, we have attempted to meet the needs of as broad an audience as possible, including all of the content that might be covered in any particular course. The result is a comprehensive book that covers more ground than an instructor could likely cover in a typical one- or two-semester course; but instructors should find, almost without fail, that the topics they wish to include in their syllabus are covered in the text. Many chapters of OpenStax College Precalculus are suitable for other freshman and sophomore math courses such as College Algebra and Trigonometry; however, instructors of those courses might need to supplement or adjust the material. OpenStax will also be releasing College Algebra and Algebra and trigonometry titles tailored to the particular scope, sequence, and pedagogy of those courses."--Preface.

## Beginning and Intermediate Algebra

Createspace Independent Publishing Platform Get Better Results with high quality content, exercise sets, and step-by-step pedagogy! Tyler Wallace continues to offer an enlightened approach grounded in the fundamentals of classroom experience in Beginning and Intermediate Algebra. The text reflects the compassion and insight of its experienced author with features developed to address the specific needs of developmental level students. Throughout the text, the author communicates to students the very points their instructors are likely to make during lecture, and this helps to reinforce the concepts and provide instruction that leads students to mastery and success. The exercises, along with the number of practice problems and group activities available, permit instructors to choose from a wealth of problems, allowing ample opportunity for students to practice what they learn in lecture to hone their skills. In this way, the book perfectly complements any learning platform, whether traditional lecture or distance-learning; its instruction is so

reflective of what comes from lecture, that students will feel as comfortable outside of class as they do inside class with their instructor.

## Pre-Calculus For Dummies

John Wiley & Sons Offers an introduction to the principles of pre-calculus, covering such topics as functions, law of sines and cosines, identities, sequences, series, and binomials.

## College Algebra

College Algebra provides a comprehensive exploration of algebraic principles and meets scope and sequence requirements for a typical introductory algebra course. The modular approach and richness of content ensure that the book meets the needs of a variety of courses. College Algebra offers a wealth of examples with detailed, conceptual explanations, building a strong foundation in the material before asking students to apply what they've learned. Coverage and Scope In determining the concepts, skills, and topics to cover, we engaged dozens of highly experienced instructors with a range of student audiences. The resulting scope and sequence proceeds logically while allowing for a significant amount of flexibility in instruction. Chapters 1 and 2 provide both a review and foundation for study of Functions that begins in Chapter 3. The authors recognize that while some institutions may find this material a prerequisite, other institutions have told us that they have a cohort that need the prerequisite skills built into the course. Chapter 1: Prerequisites Chapter 2: Equations and Inequalities Chapters 3-6: The Algebraic Functions Chapter 3: Functions Chapter 4: Linear Functions Chapter 5: Polynomial and Rational Functions Chapter 6: Exponential and Logarithm Functions Chapters 7-9: Further Study in College Algebra Chapter 7: Systems of Equations and Inequalities Chapter 8: Analytic Geometry Chapter 9: Sequences, Probability and Counting Theory

## Always Consumed

CreateSpace In the beginning, you have sex. Lots of it. Then, somewhere in the middle, you lose it. Olivia and Seth are stuck in a rut-a busy, sexless rut-and with Valentine's day fast approaching, Olivia wants to force them out of their comfort zones and into fresher waters. Seth, however, believes the trick to recapturing their passion lies in their beginning. With plans in motion this Valentine's day, Seth and Olivia attempt to rekindle their spark. Does Seth have what it takes to sweep Olivia off her feet all over again? Or is the rut

too sticky to pull themselves out of?

## Math Jokes 4 Mathy Folks

Robert Reed Pub Math Jokes 4 Mathy Folks is an absolute gem...---Jim Rubillo Professor Emeritus, Bucks County Community College, Newtown, PA The jokes in this book are well-chosen and cover a wide spectrum, from jokes for kids to jokes for math majors, from corny to thought-provoking---Art Benjamin Professor and Mathemagician, Harvey Mudd College, Claremont, CA This is a book that every math teacher from elementary school through college should have in their classroom library. Who said math can't be funny?---Victoria Miles, Middle Grades Math Teacher, Weymouth, MA Patrick Vennebush has put together the most comprehensive set of mathematical jokes I have ever seen...if you like math and you like jokes---or if you need a joke to liven up an otherwise dull and boring lecture---then you need to buy this book.---Guy Brandenburg, Retired Teacher, Washington, DC Math nerds and punsters rejoice! This is the book you've been waiting for---your perfect source for that one-liner to impress your girlfriend, boyfriend, or 8th-grade math teacher. ---Cathy Seeley, Past President, NCTM; Author of Faster isn't Smarter---Messages About Math, Teaching and Learning in the 21st Century I haven't laughed so hard since I discovered that imaginary numbers are just numbers with a not-so-real complex. Enjoy!---Edward B. Burger Professor, Williams College Williamstown, MA When not solving problems, telling jokes, or playing ultimate, G. Patrick Vennebush manages online projects for the National Council of Teachers of Mathematics. He has an M.A. in curriculum and instruction from the University of Maryland. He lives in northern Virginia with his wife Nadine, who faughs at 80% of his jokes; his twin toddlers Alex and Eli, who only appreciate 20% of his humor; and his golden retriever Remy, who has never been very good with percents

## Probability & Statistics for Engineers & Scientists

### MyStatLab Update

Pearson NOTE: This edition features the same content as the traditional text in a convenient, three-hole-punched, loose-leaf version. Books a la Carte also offer a great value-this format costs significantly less than a new textbook. Before purchasing, check with your instructor or review your course syllabus to ensure that you select the correct ISBN. Several versions of Pearson's MyLab & Mastering products exist for each title, including customized versions for individual schools, and registrations are not transferable. In addition,

you may need a CourseID, provided by your instructor, to register for and use Pearson's MyLab & Mastering products. For junior/senior undergraduates taking probability and statistics as applied to engineering, science, or computer science. This classic text provides a rigorous introduction to basic probability theory and statistical inference, with a unique balance between theory and methodology. Interesting, relevant applications use real data from actual studies, showing how the concepts and methods can be used to solve problems in the field. This revision focuses on improved clarity and deeper understanding. This latest edition is also available in as an enhanced Pearson eText. This exciting new version features an embedded version of StatCrunch, allowing students to analyze data sets while reading the book. Also available with MyStatLab MyStatLab(tm) is an online homework, tutorial, and assessment program designed to work with this text to engage students and improve results. Within its structured environment, students practice what they learn, test their understanding, and pursue a personalized study plan that helps them absorb course material and understand difficult concepts. Note: You are purchasing a standalone product; MyLab(tm) & Mastering(tm) does not come packaged with this content. Students, if interested in purchasing this title with MyLab & Mastering, ask your instructor for the correct package ISBN and Course ID. Instructors, contact your Pearson representative for more information.

## Advanced Algebra

Springer Science & Business Media Basic Algebra and Advanced Algebra systematically develop concepts and tools in algebra that are vital to every mathematician, whether pure or applied, aspiring or established. Advanced Algebra includes chapters on modern algebra which treat various topics in commutative and noncommutative algebra and provide introductions to the theory of associative algebras, homological algebras, algebraic number theory, and algebraic geometry. Many examples and hundreds of problems are included, along with hints or complete solutions for most of the problems. Together the two books give the reader a global view of algebra and its role in mathematics as a whole.

## Geometry to Go

## A Mathematics Handbook

Great Source Education Group Incorporated Covers logic and proof, basic elements of geometry, polygons, measurements, similarity, congruence, transformations, circles, solids, problem solving and non-Euclidean geometry. Also includes an almanac with math

prefixes and suffixes, study tips, guidelines for using geometry software, a graphing calculator, test-taking strategies, and tables.

## Prealgebra

"Prealgebra is designed to meet scope and sequence requirements for a one-semester prealgebra course. The text introduces the fundamental concepts of algebra while addressing the needs of students with diverse backgrounds and learning styles. Each topic builds upon previously developed material to demonstrate the cohesiveness and structure of mathematics. Prealgebra follows a nontraditional approach in its presentation of content. The beginning, in particular, is presented as a sequence of small steps so that students gain confidence in their ability to succeed in the course. The order of topics was carefully planned to emphasize the logical progression throughout the course and to facilitate a thorough understanding of each concept. As new ideas are presented, they are explicitly related to previous topics."--BC Campus website.

## Addition Grade 1

Kumon Pub North America Limited "This workbook will help your child learn addition sums beyond 20."--cover.

## Making Sense

## Teaching and Learning Mathematics with Understanding

Heinemann This book presents several key principles for teaching mathematics for understanding that you can use to reflect on your own teaching, make more informed decisions, and develop more effective systems of instruction.

## MathLinks 9

# Computerized Assessment Bank CD-ROM

## Geometry Genius

DK Children An interactive guide to shapes for 5- to 8-year-olds, this bright and bold lift-the-flap activity book helps children understand the properties of 2-D and 3-D shapes. Shapes are an important topic for early learners, and this visually appealing book will make it a lot of fun, too! Amazing Shapes features fun geometric characters, like Fox and Lion, and lift-the-flap activities that help kids relate shapes to everyday life. Characters pose key questions, such as "What's special about a sphere?," "What is an equilateral triangle?," and "How many lines of symmetry does a hexagon have?" Children can then lift the flaps and find the answers. An interactive pop-up will also bring learning to life by encouraging kids to spot different shapes within the scene. Amazing Shapes helps kids identify and describe 2-D and 3-D shapes, compare and contrast features of regular and irregular shapes, discuss the size and orientation of shapes, understand nets, identify and count lines of symmetry, and more! It gets kids thinking about shapes in their world and not just on the pages of a math book. Quiz questions and fun activities are found sprinkled throughout the book, encouraging kids to lift the flaps and find out more. Learning shapes is a highly visual topic, and this book tackles the subject in a visually appealing, fully interactive, and playful way.

## Solutions Manual to accompany Introduction to Abstract Algebra, 4e, Solutions Manual

John Wiley & Sons An indispensable companion to the book hailed an "expository masterpiece of the highest didactic value" by Zentralblatt MATH This solutions manual helps readers test and reinforce the understanding of the principles and real-world applications of abstract algebra gained from their reading of the critically acclaimed Introduction to Abstract Algebra. Ideal for students, as well as engineers, computer scientists, and applied mathematicians interested in the subject, it provides a wealth of concrete examples of induction, number theory, integers modulo  $n$ , and permutations. Worked examples and real-world problems help ensure a complete understanding of the subject, regardless of a reader's background in mathematics.

# APEX Calculus Version 3.0
