WHO GUIDELINES ON DRAWING BLOOD

BEST PRACTICES IN PHLEBOTOMY

Phlebotomy uses large, hollow needles to remove blood specimens for lab testing or blood donation. Each step in the process carries risks - both for patients and health workers. Patients may be bruised. Health workers may receive needle-stick injuries. Both can become infected with bloodborne organisms such as hepatitis B, HIV, syphilis or malaria. Moreover, each step affects the quality of the specimen and the diagnosis. A contaminated specimen will produce a misdiagnosis. Clerical errors can prove fatal. The new WHO guidelines provide recommended steps for safe phlebotomy and reiterate accepted principles for drawing, collecting blood and transporting blood to laboratories/blood banks.

HOWEXPERT GUIDE TO PHLEBOTOMY

70 TIPS TO LEARNING ABOUT BLOOD DRAWS, LAB WORK, PANELS, PLASMA, TESTS, AND THE PROFESSION OF A PHLEBOTOMIST

Howexpert If you want to learn about blood draws, lab work, panels, plasma, tests, and the profession of a phlebotomist, then check out HowExpert Guide to Phlebotomy. HowExpert Guide to Phlebotomy is a glimpse into the life of being a phlebotomist in a private clinic, hospital, or plasma plant. It includes an in-depth description of the types of patients we see, the equipment we use, and how to perform blood draws. The most important part of our profession is drawing blood by inflicting the least amount of pain possible for the patient. This means that you need to be educated on the procedures for specific tests such as a Heparin Quant Assay, a PTINR, and Lipid Panels. If you don't know these tests, odds are they will need to be redrawn, and the patient will have to undergo an unnecessary procedure. This is a safety problem since every time we puncture the skin of a patient, we risk introducing infection into their bloodstream. This book will also teach you about the order of draw, descriptions of veins, descriptions of patients, and a multitude of different scenarios. If you are beginning a career or are interested in beginning a career in phlebotomy, this book will give you a good foundation of knowledge to build upon with tangible experience. Check out HowExpert Guide to Phlebotomy to learn about blood draws, lab work, panels, plasma, tests, and the profession of a phlebotomist. About the Author Mackenna Balsewicz is a 20-year-old mother of one who has spent the last three years working as a phlebotomist at different professional facilities. She started her training at Biomat Plasma Center, where she gained the confidence and skill to draw blood and care for donors. After working at Biomat for 12 months, she transferred to Bryan Hospital to work in the laboratory department. She has fallen in love with performing phlebotomy in the hospital setting and now works at Nebraska Medicine, where she draws upwards of 60 people daily. Along with being a phlebotomist, she will be graduating from the University of Nebraska Lincoln in May of 2023 with her bachelor's degree in Psychology.
