But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research,

nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat. After obtaining his private pilot's licence at the age of just 17, Chris began his service flying career with the Royal Navy. He duly flew Wasp and Lynx helicopters from warships around the world under all kinds of circumstances. After five years instructing, the author then became a test pilot flying numerous types of experimental aircraft for research and development purposes, before returning to the Empire Test Pilot's School as a tutor. Having served at Boscombe Down for 10 years he joined the UK's Civil Aviation Authority as an aeroplane and rotorcraft test pilot. With the closure of the CAA's Flight Test Department, he went on to form his own company and has continued to test fly a wide variety of aircraft ever since. Rather than just the usual cutting-edge fast jets one associates with test pilots, Chris Taylor's book covers general aviation aircraft, including testing homebuilt aeroplanes, helicopters and autogyros. It also features the testing of ex-military jets and warbirds such as the Fieseler Storch, Sea Fury, Spitfire and the Mustang. As the author is someone who teaches test pilots how to become flight test instructors, the reader is privileged to be able to share in, quite literally, the ups and downs of aviation testing with one of the foremost test pilots of his era. Somehow, he still manages to find time to be a helicopter examiner and instructor for helicopters, aeroplanes and autogyros. While Test Pilot will appeal to pilots of every era, it is particularly aimed at the general reader, who will be taken on a journey across the skies in almost every conceivable type of civil aircraft involving almost every imaginable flying incident. **Aeronautics AERO TRADER & CHOPPER SHOPPER, APRIL 1999** [Causey Enterprises, LLC](#) **Sport Aviation AERO TRADER & CHOPPER SHOPPER, SEPTEMBER 2004** [Causey Enterprises, LLC](#) **AERO TRADER, OCTOBER 2007** [Causey Enterprises, LLC](#) **AERO TRADER, AUGUST 2004** [Causey Enterprises, LLC](#) **Official Gazette of the United States Patent Office Aircraft Powerplants, Eighth Edition** [McGraw Hill Professional](#) The most comprehensive, current guide to aircraft powerplants Fully revised to cover the latest industry advances, Aircraft Powerplants, Eighth Edition, prepares you for certification as an FAA powerplant technician in accordance with the Federal Aviation Regulations (FAR).
