Cassette Books Eagles in the Dust The Roman Defeat at Adrianopolis AD 378 [Pen and Sword](#) **In AD376 large groups of Goths, seeking refuge from the Huns, sought admittance to the Eastern Roman Empire. Emperor Valens took the strategic decision to grant them entry, hoping to utilize them as a source of manpower for his campaigns against Persia. The Goths had been providing good warriors to Roman armies for decades. However, mistreatment of the refugees by Roman officials led them to take up arms against their hosts. The resultant battle near Adrianopolis in AD378, in which Valens lost his life, is regarded as one of the most significant defeats ever suffered by Roman arms. The Roman historian Ammianus Marcellinus called it the worst massacre since Cannae, nearly six hundred years previously. Modern historians have accorded it great significance both at a tactical level, due to the success of Gothic cavalry over the vaunted Roman infantry, and in strategic terms, often citing it as the beginning of the end for the Empire. Adrian Coombs-Hoar untangles the debate that still surrounds many aspects such claims with an insightful account that draws on the latest research.** [Low Tech Hacking Street Smarts for Security Professionals Elsevier](#) **A guide to low tech computer hacking covers such topics as social engineering, locks, penetration testing, and information security. The aim of this work is to correct this glaring deficiency, with the focus on men and women in medicine, applied sciences and engineering. It covers immigration from the period of mass migration and beyond, irrespective whether they were born in their European ancestral homes or whether they have descended from them. This compendium clearly demonstrates the Czech and Slovak immigrants, including Bohemian Jews, have brought to the New World, in these areas, their talents, their ingenuity, the technical skills, their scientific knowhow, as well as their humanistic and spiritual upbringing, reflecting upon the richness of their culture and traditions, developed throughout centuries in their ancestral home. This accounts for their remarkable success and achievements of theses settlers in the New World, transcending through their descendants, as this publication demonstrates. The monograph has been organized into sections by subject areas, i.e., Medicine, Allied Health Sciences and Social Services, Agricultural and Food Science, Earth and Environmental Sciences and Engineering. Each individual entry is usually accompanied with literature, and additional biographical sources for readers who wish to pursue a deeper study. The selection of individuals has been strictly based on geographical vantage, without regards to their native language or ethnical background. Some of the entries may surprise you, because their Czech or Slovak ancestry has not been generally known. What is conspicuous is a large percentage of listed individuals being Jewish, which is a reflection of high-level of education and intellect of Bohemian Jews. A prodigious number of accomplished women in this study is also astounding, considering that, in the 19th century, they rarely had careers and most professions refused entry to them.** [LIFE LIFE Magazine](#) **is the treasured photographic magazine that chronicled the 20th Century. This volume covers research methods providing a theoretical overview on metabolic alterations of cancer cells and a series of protocols that can be employed to study oncometabolism, in vitro, ex vivo and in vivo. Malignant cells exhibit metabolic changes when compared to their normal counterparts, owing to both genetic and epigenetic alterations. Although such a metabolic rewiring has recently been indicated as "yet another" general hallmark of cancer, accumulating evidence suggests that the metabolic alterations of each neoplasm rather represent a molecular signature that intimately accompanies, and hence cannot be severed from, all facets of malignant transformation. Continues the legacy of this premier serial with quality chapters authored by leaders in the field Covers research methods in biomineralization science Contains sections on such topics providing a theoretical overview on metabolic alterations of cancer cells and a series of protocols that can be employed to study oncometabolism, in vitro, ex vivo and in vivo. **Experimental Design for the Life Sciences** [Oxford University Press](#) **Experimental Design for the Life Sciences** teaches the reader how to effectively design experiments to ensure today's students are equipped with the skills they need to be the researchers of tomorrow.
