**PRACTICAL APPLICATIONS OF CYBERPSYCHOLOGICAL THEORY AND RESEARCH**

---

*Springer Cyberpsychology is an emerging area of psychological study that aims to understand and explain all facets of online behaviour. This book brings together overviews from a number of leading authorities in the field, to suggest how academic theory and research can be applied to a variety of online behaviours. Both positive and negative behaviours are considered, including topics as diverse as parenting the online child, age-related internet usage and cultural considerations in online interactions. Psychological research can no longer view online and offline worlds as different entities, but must consider online behaviours as equally distinct as offline activities. This is especially apparent when looking at online dating, the role that social networks play in organisations and online consumer behaviours, and in a consideration of the role that psychological research plays in underpinning the multi-billion pound gaming industry. Focusing on these personal applications of the Internet, insight is also offered into the role that theory and research plays in training military personnel as well as the use of psychometric testing to select and retain employees.*

## **ADVANCED CALCULUS**

---

### **REVISED**

---

*World Scientific Publishing Company An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds.*

**THE SURPRISING TRUTH ABOUT WHAT MOTIVATES US**

---

*Penguin The New York Times bestseller that gives readers a paradigm-shattering new way to think about motivation from the author of When: The Scientific Secrets of Perfect Timing Most people believe that the best way to motivate is with rewards like money—the carrot-and-stick approach. That's a mistake, says Daniel H. Pink (author of To Sell Is Human: The Surprising Truth About Motivating Others). In this provocative and persuasive new book, he asserts that the secret to high performance and satisfaction-at work, at school, and at home—is the deeply human need to direct our own lives, to learn and create new things, and to do better by ourselves and our world. Drawing on four decades of scientific research on human motivation, Pink exposes the mismatch between what science knows and what business does—and how that affects every aspect of life. He examines the three elements of true motivation—autonomy, mastery, and purpose—and offers smart and surprising techniques for putting these into action in a unique book that will change how we think and transform how we live.*

**THE GENERAL FACTOR OF PERSONALITY**

---

*Academic Press The General Factor of Personality improves our understanding of the personality structure and the relations between major personality dimensions, as well as major dimensions of the entire non-cognitive sphere of psychological variables. The results of the empirical testing and theoretical evaluations in this book contribute to the more comprehensive and precise theoretical framework of the General Factor of Personality (GFP) and that of the entire personality structure. Additionally, the book answers some unresolved questions concerning the nature of the GFP, including whether it is based more on correlations in real behavior or on other less substantial factors between lower-order dimensions of personality. This book is crucially important not only for theoretical reasons, but also for*

the tremendous practical and applied value of the assumed general dimension of personality. As a common denominator of all the most important fields of personality beyond cognition (Big Five, well-being, coping, emotionality, motivation, self-concept, self-esteem, control, wisdom and others), the GFP represents an extremely strong single predictor of the quality of life, mental health and well-being, career, academic success, and the quality of family and interpersonal relations. Reviews the theoretical and methodological work on the General Factor of Personality (GFP) Presents major research results in the field of GFP and the dimensional structure of personality Provides a balanced and objective approach to the topic of GFP, addressing criticisms and controversies Considers the practical and applied aspects of this research Draws conclusions on the bioevolutionary model of GFP to give a more thorough understanding of biological bases of human personality

### **AAUSC 2013 VOLUME - ISSUES IN LANGUAGE PROGRAM DIRECTION**

---

Cengage Learning The democratization of schooling and greater access to higher education, together with the implementation of language requirements in colleges and universities across the United States, has led to a higher degree of diversity in language classrooms. One usually thinks of gender, ethnic, racial, or social diversity, but individual differences, including learning disabilities and special needs, also contribute to diversity and have an impact on assessment, placement, and curriculum. In their role as administrators and teacher educators, Language Program Directors (LPDs) seek to integrate current practices and research in applied linguistics into program design and administration, including assessment. To make individual differences a theoretically grounded integral component of

their decision-making processes, LPDs need resources that provide cutting-edge primary and secondary research on the conceptualization, measurement, and consequences of individual differences on language development in the classroom. This volume provides LPDs with the means to transmit information to their instructors in effective ways so that the instructors develop a sophisticated understanding of individual differences, including learning disabilities, special needs, and strategies for dealing with diverse student populations. In addition, this volume creates a forum for reflections about and solutions to challenges related to diversity as it relates to individual differences.
