Pro OpenSolaris

A New Open Source OS for Linux Developers and Administrators

Apr Press OpenSolaris is a rapidly evolving operating system with roots in Solaris 10, suitable for deployment on laptops, desktop workstations, storage appliances, and data center servers from the smallest single-purpose systems to the largest enterprise-class systems. The growing OpenSolaris community now has hundreds of thousands of participants and users in government agencies, commercial businesses, and universities, with more than 100 user groups around the world contributing to the use and advancement of OpenSolaris. New releases of OpenSolaris become available every six months, with contributions from both Sun engineers and OpenSolaris community members; this book covers the OpenSolaris 2008.11 release. Pro OpenSolaris was written to demonstrate that you can host your open source applications and solutions on OpenSolaris, taking advantage of its advanced

features such as containers and other forms of virtualization, the ZFS file system, and DTrace. It's assumed that you are already fairly knowledgeable about developing on Linux systems, so the authors give an overview of the similarities and differences between Linux and OpenSolaris, and then present details on how to use the Service Management Facility (SMF), ZFS, zones, and even a bit of DTrace. They also provide pointers to the many project communities associated with new OpenSolaris features. Special focus is given to web development using familiar applications such as Apache, Tomcat, and MySQL, along with the NetBeans IDE, and showing you how to exploit some of OpenSolaris's unique technologies.

Cosmic Challenge

The Ultimate Observing List for Amateurs

Cambridge University Press Listing more than 500 sky targets, both near and far, in 187 challenges, this observing guide will test novice astronomers and advanced veterans alike. Its unique mix of Solar System and deep-sky targets will have observers hunting for the Apollo lunar landing sites, searching for satellites orbiting the outermost planets, and exploring hundreds of star clusters, nebulae, distant galaxies, and quasars. Each target object is accompanied by a rating indicating how difficult the object is to find, an in-depth visual description, an illustration showing how the object realistically looks, and a detailed finder chart to help you find each challenge quickly and effectively. The guide introduces objects often overlooked in other observing guides and features targets visible in a variety of conditions, from the inner city to the dark countryside. Challenges are provided for the naked eye, through binoculars and the largest backyard telescopes.

OpenSolaris Bible

John Wiley & Sons After a beginning overview of the history of OpenSolaris, its open-source licensing, and the community development model, this book then goes on to highlight the aspects of OpenSolaris that differ from more familiar operating systems. You'll learn how to become a power user of OpenSolaris by maximizing the abilities of advanced features like Dtrace, the fault management architecture, ZFS, the service management facility, and Zones. Authors provide insider tips, unique tricks, and practical examples to help you stay sharp with the latest features of OpenSolaris.

When the Invasion of Land Failed

The Legacy of the Devonian Extinctions

Columbia University Press The invasion of land by ocean-dwelling plants and animals was one of the most revolutionary events in the evolution of life on Earth, yet the animal invasion almost failed—twice—because of the twin mass extinctions of the Late Devonian Epoch. Some 359 to 375 million years ago, these catastrophic events dealt our ancestors a blow that almost drove them back into the sea. If those extinctions had been just a bit more severe, spiders and insects—instead of vertebrates—might have become the ecologically dominant forms of animal life on land. This book examines the profound evolutionary consequences of the Late Devonian extinctions and the various theories proposed to explain their occurrence. Only one group of four-limbed vertebrates exists on Earth, while other tetrapod-like fishes are extinct. This gap is why the idea of "fish with feet" seems so peculiar to

us, yet such animals were once a vital part of our world, and if the Devonian extinctions had not happened, members of these species, like the famous *Acanthostega* and *Ichthyostega*, might have continued to live in our rivers and lakes. Synthesizing decades of research and including a wealth of new discoveries, this accessible, comprehensive text explores the causes of the Devonian extinctions, the reasons vertebrates were so severely affected, and the potential evolution of the modern world if the extinctions had never taken place.

Women in Ancient Egypt

Harvard University Press An idealised version of women appears everywhere in the art of ancient Egypt, but the true nature of these women's lives has long remained hidden. Robins' book, gracefully written and copiously illustrated, cuts through the obscurity of the ages to show us what the archaeological riches of Egypt really say about how these women lived, both in the public eye and within the family. The art and written records of the time present a fascinating puzzle. But how often has the evidence been interpreted, consciously or otherwise, from a male viewpoint? Robins conducts us through these sources with an archaeologist's relish, stripping away layer after interpretive layer to expose the reality beneath. Here we see the everyday lives of women in the economic, legal, or domestic sphere, from the Early Dynastic Period almost 5,000 years ago to the conquest of Alexander in 332 B.C. Within this kingdom ruled and run by men, women could still wield influence indirectly—and in some cases directly, when a woman took the position of king. The exceptional few who assumed real power appear here in colorful detail, alongside their more traditional counterparts. Robins examines the queens' reputed divinity and takes a frank look at the practice of incest within Egypt's dynasties. She shows us the special role of women in religious rites and offices, and assesses their depiction in Egyptian art as it portrays their position in society. By drawing women back into the picture we have of ancient Egypt, this book opens a whole new perspective on one of world history's most exotic and familiar cultures.

Edmund Spenser

Routledge This collection represents some of the best recent critical writing on Edmund Spenser, a major Renaissance English poet. The essays cover the whole of Spenser's work, from early literary experiments such as *The Sheperdes Calendar*, to his unfinished crowning work, *The Fairie Queene*. The introduction provides an overview of critical responses to Spenser, setting his work and the debates which it has generated in their perspective contexts: new historicist, post-structural, psychoanalytic and feminist. His study also covers the critical responses of leading British, Irish and American scholars.

Small Animal Oncology

Saunders Limited *Saunders Solutions in Veterinary Practice* consists of a series of practical handbooks on selected medical topics on specific veterinary problems. Case-based, this series is aimed at the small animal veterinary practitioner who has qualified less than 10 years and needs quick access to information and wants to increase his/her confidence on handling that range of cases that cover the spectrum that lies between the simple routine first opinion case and the referral. *Solutions in Veterinary Practice* provides additional knowledge that will lead to improved skills and practice for veterinary practitioners. Not only practitioners, but also veterinary students nearing the end of their course will find this series very useful to brush up their knowledge in a particular area. The volumes are also written with the veterinary nurse in mind with a particular interest in a specific topic, using 'Nurse Boxes' in the text to guide them to the specific information they need. new approach: clinical cases offering examination, treatment options, clinical tips relevant for the

general small animal veterinary practitioner - all case descriptions based on common template offers synoptic, easy accessible and essential information provides essential information on selected topics authorship ensures accuracy of information relevant to all general practitioners written to increase the skill and practice the general veterinary practitioner intend to meet CPD-need, but focus on: differential diagnosis and practical case handling offers self-assessment features at the end of every chapter making it relevant for veterinary students as well broad readership: practitioners and students indicated in the text by 'Notes for Vets'; nurses indicated in the text by 'Notes for Nurses' and pet owners indicated in the text by 'Notes for Pet Owners' handy format with flexi cover species covered to be limited to cats, dogs and rabbits full colour throughout BSAVA Manuals in various topics, Blackwell, extent varies from 169 to 464 pages, price varies from £47 to £59 for members and £69 to £89 for non-members. - system based approach case based approach as opposed to Blackwell's disease based approach as we strongly feel that this approach is more beneficial for the practitioner - taking the veterinary practitioner as a starting point (the animal comes in the practice with certain symptoms, then what happens next) - our books will be synoptic, easy accessible and with the essential information (bullet points) for user-friendliness and easy access to the content. The majority of the BSAVA Manual have included a lot of information and have moved from bullet pointed text to more elaborate text. - we want the reader to understand why certain steps are taken by means of decision trees: if you do this, then this will happen; if you chose to follow this path, this will be the consequence, etc. It will be quite a challenge to get this right and may not be applicable to every case, but the other potential authors felt very strongly we should include this as this is lacking in the majority of books at the moment - full colour throughout; no plate sections - our books will not aim to cover the whole range, but concentrate on the most common cases that general/ small animal practitioners will see in their practice - coverage of dogs, cats and rabbits - ours will have handy format and flexi cover; BSAVA Manual published in very large format: 297 x 210 mm (American A4 - BSAVA Manuals do not provide the set-by-step guide as we propose - manuals have become top heavy recently and drift towards a more academic and less practical approach Dobson: Small Animal Oncology, 2001, Blackwell, 304 pages, \$94.99 - written in note form and without using the case-based approach: from epidemiology, etiology, pathology and presentation through to staging, management, and prognosis of an chosen malignancy

Childhood and Adolescent Obesity

This book covers the development and treatment of childhood and adolescent obesity. It is written from a biopsychosocial perspective and explores obesity from a holistic perspective and addresses the extent of the obesity epidemic and how obesity is defined and assessed in children. It also chronicles the varying causes and contributors to childhood obesity as well as the physical, psychological, and social consequences of it. The author highlights how a psychologist assesses childhood obesity and the potential psychological disorders related to obesity and also includes descriptions of specific interventions for childhood obesity. The intervention section integrates a community-based perspective that is often lacking in the literature and specifically addresses underserved populations. Finally, this book concludes with practical case studies, discussion questions, and case recommendations.

Electric Field Analysis

CRC Press **Electric Field Analysis** is both a student-friendly textbook and a valuable tool for engineers and physicists engaged in the design work of high-voltage insulation systems. The text begins by introducing the physical and mathematical fundamentals of electric fields, presenting problems from power and dielectric engineering to show how the theories are put into practice. The book then describes various techniques for electric field analysis and their significance in the validation of numerically computed results, as well as: Discusses finite difference, finite element, charge simulation, and surface charge simulation methods for the numerical computation of electric fields Provides case studies for electric field distribution in a cable termination, around a post insulator, in a condenser bushing, and around a gas-insulated substation (GIS) spacer Explores numerical field calculation for electric field optimization, demonstrating contour correction and examining the application of artificial neural networks Explains how high-voltage field optimization studies are carried out to meet the desired engineering needs **Electric Field Analysis** is accompanied by an easy-to-use yet comprehensive software for electric field computation. The software, along with a wealth of supporting content, is available for download with qualifying course adoption.

Touring the Universe through Binoculars

A Complete Astronomer's Guidebook

Wiley This comprehensive work takes you on a personal tour of the universe using nothing more than a pair of binoculars. More comprehensive than any book currently available, it starts with Earth's nearest neighbor, the moon, and then goes on to explore each planet in the solar system, asteroids, meteors, comets and the sun. Following this, the reader is whisked away into deep space to explore celestial bodies including stars that are known and many sights less familiar. The final chapter includes a detailed atlas of deep-sky objects visible through binoculars. The appendices include guidance on how to buy, care for and maintain astronomical binoculars, tips and hints on using them, and detailed information on several home-made binocular mounts.

Proceedings

Springer This book constitutes the refereed proceedings of the 8th International Conference on Web Reasoning and Rule Systems, RR 2014, held in Athens, Greece in September 2014. The 9 full papers, 9 technical communications and 5 poster presentations presented together with 3 invited talks, 3 doctoral consortial papers were carefully reviewed and selected from 33 submissions. The conference covers a wide range of the following: semantic Web, rule and ontology languages, and related logics, reasoning, querying, searching and optimization, incompleteness, inconsistency and uncertainty, non-monotonic, common sense, and closed-world reasoning for the web, dynamic information, stream reasoning and complex event processing, decision making, planning, and intelligent agents, machine learning, knowledge extraction and information retrieval, data management, data integration and reasoning on the web of data, ontology-based data access, system descriptions, applications and experiences.

Telomeres, Diet and Human Disease

Advances and Therapeutic Opportunities

CRC Press The maintenance of telomeres—repetitive sequences at the end of chromosome—is essential to health. Dysfunction in telomere maintenance pathways plays a role in aging, cancer, atherosclerosis and other diseases. This has led to telomere maintenance as a prime target for patient therapies. This book describes the advances in telomere research as it applies to human health and especially how lifestyle and dietary factors could modify the telomerase maintenance process. The book examines the mechanisms involved, the primary of which are oxidative stress and the role of sirtuins, and how they can be modified by dietary patterns such as Mediterranean diet.
