Chemistry: An Atoms First Approach [Cengage Learning](#) Steve and Susan Zumdahl's texts focus on helping students build critical thinking skills through the process of becoming independent problem-solvers. They help students learn to think like a chemist so they can apply the problem solving process to all aspects of their lives. In CHEMISTRY: AN ATOMS FIRST APPROACH, the Zumdahls use a meaningful approach that begins with the atom and proceeds through the concept of molecules, structure, and bonding, to more complex materials and their properties. Because this approach differs from what most students have experienced in high school courses, it encourages them to focus on conceptual learning early in the course, rather than relying on memorization and a plug and chug method of problem solving that even the best students can fall back on when confronted with familiar material. The atoms first organization provides an opportunity for students to use the tools of critical thinkers: to ask questions, to apply rules and models and to evaluate outcomes. Emancipatory Perspectives on Madness Psychological, Social, and Spiritual Dimensions [Routledge](#) This collection offers a diverse range of perspectives that seek to find meaning in madness. Mainstream biomedical approaches tend to interpret experiences commonly labelled "psychotic" as being indicative of a biological illness that can best be ameliorated with prescription drugs. In seeking to counter this perspective, psychosocial outlooks commonly focus on the role of trauma and environmental stress. Although an appreciation for the role of trauma has been critical in expanding the ways in which we view madness, an emphasis of this kind may nevertheless continue to perpetuate a subtle form of reductivism—madness continues to be understood as the product of a deficit. In seeking to move beyond causal-reductivism, this book explores a variety of perspectives on the question of finding inherent meaning in madness and extreme states. Contributors to this book are distinguished writers and researchers from a variety of international and interdisciplinary perspectives. Topics span the fields of depth psychology and psychoanalysis, creativity, Indigenous and postcolonial approaches, neurodiversity, mad studies, and mysticism and spirituality. This collection will be of interest to mental health professionals, students and scholars of the humanities and social sciences, and people with lived experience of madness and extreme states. Readers will come away with an appreciation of the more generative aspects of madness, and a recognition that these experiences may be important for both personal and collective healing. Techniques in Organic Chemistry [Macmillan](#) "Compatible with standard taper miniscale, 14/10 standard taper microscale, Williamson microscale. Supports guided inquiry"--Cover. Organic Chemistry [Wiley](#) On the cover of this book is a Pacific yew tree, found in the ancient forests of the Pacific Northwest. The bark of the Pacific yew tree produces Taxol, found to be a highly effective drug against ovarian and breast cancer. Taxol blocks mitosis during eukaryotic cell division. The supply of Taxol from the Pacific yew tree is vanishingly small, however. A single 100-year-old tree provides only about one dose of the drug (roughly 300 mg). For this reason, as well as the spectacular molecular architecture of Taxol, synthetic organic chemists fiercely undertook efforts to synthesize it. Five total syntheses of Taxol have thus far been reported. Now, a combination of isolation of a related metabolite from European yew needles, and synthesis of Taxol from that intermediate, supply the clinical

demand. This case clearly demonstrates the importance of synthesis and the use of organic chemistry. It's just one of the many examples used in the text that will spark the interest of students and get them involved in the study of organic chemistry!
