A CRETAN HEALER'S HANDBOOK IN THE BYZANTINE TRADITION

TEXT, TRANSLATION AND COMMENTARY

Ashgate Publishing, Ltd. *In 1930 the Cretan healer Nikolaos Konstantinos Theodorakis of Meronas re-copied a notebook containing medical lore passed down through his family over generations. The present volume offers an edition of this notebook together with an English translation, the first of its kind. It belongs to the genre of iatrosophia, practical handbooks dating mainly to the 17th to 19th centuries which compiled healing wisdom, along with snippets of agricultural, meteorological and veterinary advice, and admixtures of religion, astrology and magic. Both fascinating and of critical importance, iatrosophia allow glimpses of classical and Byzantine medical sources and illustrate the vitality and resilience of Greek traditional medical and botanical knowledge. From years spent exploring local healing customs in Crete's Amari region, Patricia Clark is able to present Theodorakis' iatrosophion against a rich historical, geographical and social background. Introductory essays and explanatory*

notes to the translation give context to the iatrosophion and provide the specialized information necessary for a good understanding of the text. The abundant materia medica of the notebook is treated in a substantial appendix. Each animal, mineral, plant or product is provided with an overview of its various names through the millennia. Such entries are not only a key to understanding the Greek medical legacy, but also a vivid illustration of its usage from antiquity to the present day.

THE PORPHYRIN HANDBOOK

PHTHALOCYANINES: SYNTHESIS

Academic Press *The Porphyrin Handbook, Volume 15: Phthalocyanines: Synthesis* provides information pertinent to every aspect of the chemistry, synthesis, spectroscopy, and structure of phthalocyanines. This book examines the biology and medical implications of porphyrin systems. Organized into five chapters, this volume begins with an overview of the importance of compounds such as heme and chlorophyll that play vital roles in the biological systems responsible for the transportation of oxygen to cells in the body. This text then explores the different methods used for the preparation of phthalocyanine and its metallated derivatives. Other chapters consider the detailed survey of phthalocyanine formation, characterization, and purification. This book discusses as well the synthesis of low-symmetry phthalocyanines and related compounds. The final chapter deals with a survey of the structure, synthesis, and physiochemical properties of porphyrazines with annulated heterocycles. This book is a valuable resource for research scientists, engineers, and clinicians.

THE GENERAL AVIATION HANDBOOK

Ian Allen Pub *This is a completely new and revised edition of the General Aviation Handbook, long overdue since it has been over 10 years since the last edition was published. This edition is fully revised and updated and contains 10 years worth of updated material, including the addition of a number of manufacturers and aircraft which were omitted from earlier editions for various reasons. Aircraft new to this edition include the so-called "heavy microlights", which are now an important part of the worldwide light aircraft scene. About 90 percent of the photos are new, and larger page size provides greater space for large data tables and photos. Previous editions have been strong sellers; this is the main reference book on this important sector of the aviation world, and this new edition will be welcomed by both aviation enthusiasts and those involved in the aviation industry.*

THEORETICAL NUCLEAR PHYSICS IN ITALY

World Scientific *This volume contains the proceedings of the conference held in Cortona, October 6-9, 2004, that was organized as part of the project "Theoretical Physics of Nuclei and Many-Body Systems" involving 17 Italian Universities and sponsored by the Italian Ministry of Research and University. All invited papers on the main subjects of the project as well as all the individual contributions on special topics are included. As such these proceedings review the work performed in the last two years by the participating Italian community of nuclear theorists. In addition, in a panel international perspectives are focussed on the future programmes of the experimental physics community. Contents: Nuclear Structure (G Colò) Quark Gluon Plasma and Relativistic Heavy Ion Collisions (F Becattini) Nuclear Astrophysics (A Drago) Few-Nucleon Systems (A Kievsky) Highlights on Heavy Ion Reactions around the Fermi Energy (A Bonasera) Nuclear Dynamics (G Pollarolo) Nuclear Physics with Electroweak Probes (G Co') Study of Strongly Interacting Matter (13HP) (C Guaraldo) The PANDA Experimental Program (P Gianotti) EURONS — The Integrated Infrastructure Initiative of Nuclear-Structure Physics in Europe within FP6 (A C Mueller et al.) Hadron Structure: The Physics Program of HAPNET (P J Mulders) and other papers Readership: Researchers and students in theoretical nuclear physics and related fields. Keywords: Nuclear Physics; Theoretical Physics; Nuclear Astrophysics; Hadronic Matter; Few- and Many-Body Systems*

ANALYTICAL OR SEMI-ANALYTICAL SOLUTIONS OF FUNCTIONALLY GRADED MATERIAL STRUCTURES

Springer Nature *This book provides a comprehensive introduction to the analysis of functionally graded materials and structures. Functionally graded materials (FGMs), in which the volume fractions of two or more constituent materials are designed to vary continuously as a function of position along certain direction(s), have been developed and studied over the past three decades. The major*

advantage of FGMs is that no distinct internal boundaries exist, and failures from interfacial stress concentrations developed in conventional components can be avoided. The gradual change of material properties can be tailored to different applications and working environments. As these materials' range of application expands, new methodologies have to be developed to characterize them, and to design and analyze structural components made of them. Despite a number of existing papers on the analysis of functionally graded materials and structures, there is no single book that is devoted entirely to the analysis of functionally graded beams, plates and shells using different methods, e.g., analytical or semi-analytical methods. Filling this gap in the literature, the book offers a valuable reference resource for senior undergraduates, graduate students, researchers, and engineers in this field. The results presented here can be used as a benchmark for checking the validity and accuracy of other numerical solutions. They can also be used directly in the design of functionally graded materials and structures.

ORGANOMETALLIC CHEMISTRY

Royal Society of Chemistry Organometallic chemistry is an interdisciplinary science which continues to grow at a rapid pace. Although there is continued interest in synthetic and structural studies the last decade has seen a growing interest in the potential of organometallic chemistry to provide answers to problems in catalysis, synthetic organic chemistry and also in the development of new materials. This Specialist Periodical Report aims to reflect these current interests reviewing progress in theoretical organometallic chemistry, main group chemistry, the lanthanides and all aspects of transition metal chemistry. Volume 29 covers literature published during 1999.

SOUTHERN MINNESOTA ALL-OUTDOORS ATLAS & FIELD GUIDE

Sportsman's Connection Sportsman's Connection's Southern Minnesota All-Outdoors Atlas & Field Guide contains maps created at twice the scale of other road atlases, which means double the detail. And while the maps are sure to be the finest quality you have ever used, the thing that makes this book unique is all the additional information. Your favorite outdoor activities including fishing lakes and streams, hunting, camping, hiking and biking, snowmobiling and off-roading, paddling, skiing, golfing and wildlife viewing are covered in great depth with helpful editorial and extensive tables, which are all cross-referenced and indexed to the map pages in a way that's fun and easy to use.

ADVANCES IN NUCLEAR DYNAMICS 5

Springer Science & Business Media This workshop was the 15 in a series that addresses the subject of the dynamics of nuclear reactions. These workshops are dedicated to the concept that bringing together scientists from diverse areas of nuclear reactions promotes the vibrant exchange of ideas. This workshop hosted presentations from experimentalists and theorists, intermediate energy to ultrarelativistic energies, and final results to recent speculations. Many of these scientists would not normally be exposed to the work done in other subfields. Thus the Winter Workshop on Nuclear Dynamics plays a unique role in information exchange and the stimulation of new ideas. The field of nuclear dynamics has a bright future. New accelerators are being planned and completed around the world. New detectors are being constructed. New models and theories are being developed to describe these phenomena. The Winter Workshop on Nuclear Dynamics will continue to promote this lively and compelling field of research. **WOLFGANG BAUER AND GARY D. WESTFALL** v Previous Workshops The following table contains a list of the dates and locations of the previous Winter Workshops on Nuclear Dynamics as well as the members of the organizing committees. The chairpersons of the conferences are underlined.
