KEY=OSPREY - JUAREZ BRYSON

Bell/Boeing V-22 Osprey

Ian Allen Pub This joint Bell and Boeing project was established in 1982 in response to the Joint Services Advanced Vertical Lift Program covering a wide performance envelope and multiple tasks. The answer came in the form of the V-22 tilt-rotor, a concept tested earlier by Bell with their 1977 XV-15. The transport aircraft style fuselage of the V-22, able to carry 24 troops, is topped by a wing with a complex flap/aileron system and two swiveling pods housing Rolls-Royce turboshaft engines, each driving enormous three-bladed prop-rotors. The intention was that the USAF would receive the CV-22B for special missions work, the US Marine Corps the MV-22B assault transports and the US Navy the HV-22B CSAR/fleet logistics version, but the technologically challenging program has been set back by fatal accidents and an 18 month grounding while flight safety issues were addressed. However, it is set to recommence a restricted development program with the intention that the production aircraft will begin to be delivered at the end of 2003 and gain initial operating capability by 2005 making this comprehensive new book a timely in-depth coverage of the aircraft.

The Dream Machine

The Untold History of the Notorious V-22 Osprey

Simon and Schuster WHEN THE MARINES decided to buy a helicopter-airplane hybrid "tiltrotor" called the V-22 Osprey, they saw it as their dream machine. The tiltrotor was the aviation equivalent of finding the Northwest Passage: an aircraft able to take off, land, and hover with the agility of a helicopter yet fly as fast and as far as an airplane. Many predicted it would reshape civilian aviation. The Marines saw it as key to their very survival. By 2000, the Osprey was nine years late and billions over budget, bedeviled by technological hurdles, business rivalries, and an epic political battle over whether to build it at all. Opponents called it one of the worst boondoggles in Pentagon history. The Marines were eager to put it into service anyway. Then two crashes killed twenty- three Marines. They still refused to abandon the Osprey, even after the Corps' own proud reputation was tarnished by a national scandal over accusations that a commander had ordered subordinates to lie about the aircraft's problems. Based on in-depth research and hundreds of interviews, *The Dream Machine* recounts the Marines' quarter-century struggle to get the Osprey into combat. Whittle takes the reader from the halls of the Pentagon and Congress to the war zone of Iraq, from the engineer's drafting table to the cockpits of the civilian and Marine pilots who risked their lives flying the Osprey—and sometimes lost them. He reveals the methods, motives, and obsessions of those who designed, sold, bought, flew, and fought for the tiltrotor. These stories, including never before published eyewitness accounts of the crashes that made the Osprey notorious, not only chronicle an extraordinary chapter in Marine Corps history, but also provide a fascinating look at a machine that could still revolutionize air travel.

Excerpt: The Bell Boeing V-22 Osprey is an American multi-mission, military, tiltrotor aircraft with both a vertical takeoff and landing (VTOL), and short takeoff and landing (STOL) capability. It is designed to combine the functionality of a conventional helicopter with the long-range, high-speed cruise performance of a turboprop aircraft. The V-22 originated from the United States Department of Defense Joint-service Vertical take-off/landing Experimental (JVX) aircraft program started in 1981. The team of Bell Helicopter and Boeing Helicopters was awarded a development contract in 1983 for the tiltrotor aircraft. The Bell Boeing team jointly produce the aircraft. The V-22 first flew in 1989, and began flight testing and design alterations; the complexity and difficulties of being the first tiltrotor intended for military service in the world led to many years of development. The United States Marine Corps began crew training for the Osprey in 2000, and fielded it in 2007; it is supplementing and will eventually replace their CH-46 Sea Knights. The Osprey's other operator, the U.S. Air Force, fielded their version of the tiltrotor in 2009. Since entering service with the U.S. Marine Corps and Air Force, the Osprey has been deployed in both combat and rescue operations over Iraq, Afghanistan and Libya. The failure of the Iran hostage rescue mission in 1980 demonstrated to the United States military a need for "a new type of aircraft, that could not only take off and land vertically but also could carry combat troops, and..."

We are an institution of higher learning; we need to be the best with everything we do. We are preparing the next generation of heroes for the greatest fighting force on the planet - the 8404 Hospital Corpsman assigned to the United States Marine Corps. They operate at the tip-of-the spear providing combat medicine to our operational forces; they are critical to the success of the Navy & Marine Corps Medicine Team. What each one of us does on a daily basis matters, regardless of our job. We all contribute to the mission. No one job is more important than the other. If just one link (team member) in this chain fails to perform a portion of the mission to standard, we all fail. You have the ability to make a positive difference in peoples' lives every day. Every member of this team should ask themselves, "Am I living by our core values and making decisions that are consistent with these values when I interact with students, staff and the American public." Key points: - Know your chain of command and how to use it. You have not exhausted your chain of command at FMTB-West until the issue reaches me. - If you are lacking something to perform your mission, bring it to the attention of leadership so we can promptly address it. - Any safety issue should immediately be brought to leadership. - Continually strive to improve processes; ask for help before it's too late (in all aspects of your life and career). - If you see a problem, fix it or bring it to the attention of someone who can. Don't ignore it. - Supporting each other is just as important as supporting the mission. - Continue the relentless pursuit of customer satisfaction; feedback is a valuable tool in life and career. - Basic military courtesy should be a part of everyday life. - Always strive to do the right thing, even when no one is looking or when tempted to take the "easy" wrong. As a leader, I believe all members of the team are important. Our civilian shipmates are essential to the success of our mission. As a military leader, I believe, as the Sailor creed says, "I proudly serve my country's Navy combat team with Honor, Courage and Commitment. I am committed to excellence and the fair treatment of all". I cannot over emphasize the importance of leadership from E-1 to O-6, everyone has a part; I expect officers to lead from the front by setting the example. Be sure that regularly scheduled performance counseling sessions are conducted for military and civilian employees. Cover the good which

should be sustained as well as the areas which need improvement. Although I like to be informed, I believe in allowing leaders to lead, managers to manage. A big part of my job is to provide you the support systems necessary for you to accomplish your mission. Tell me what you need and don't worry how it will be resourced. Let me worry about that.

P-38 Lightning Aces of the Pacific and CBI

Osprey Publishing The P-38 was used on virtually every front to which the USAAF were committed, but enjoyed its greatest successes in the Pacific and China-Burma-India (CBI) theatres. The speed, range and firepower of the P-38 made it the favourite of nearly all aircrew fighting in the Solomons, New Guinea and the Philippines, and over 1800 Japanese aircraft fell to its guns. From the first encounters at the end of 1942 until the Lightning scored the final Fifth Air force victories in August 1945, these pilots made the Pacific skies very much their own battleground.

Sopwith Pup Aces of World War 1

Bloomsbury Publishing The Sopwith Pup was the forerunner of the hugely successful Sopwith Camel, which duly became the most successful fighter of World War 1. The first proper British fighting scout, the first Pups - the Royal Naval Air Service - arrived on the Western Front in 1916. Although regarded as a 'nice' aeroplane to fly, pilots who used it in combat gained much success during the first half of 1917. The Royal Flying Corps also used the Pup from January 1917 onwards, with the final combats with the machine occurring in December of that year. This book describes the combat careers of the successful Pup aces, how they flew and how they fought.

P-38 Lightning Aces of the 82nd Fighter Group

Bloomsbury Publishing When the 82nd Fighter Group was organized in March 1942, most of its initial pilot cadre was comprised of newly graduated staff sergeant pilots of Class 42-C - enlisted men! They learned to fly the P-38 at Muroc, in California's Mojave Desert, and then moved to the Los Angeles area to continue their training and to serve as part of its air defence. In September 1942 the group was transported to the East Coast, from where it shipped out to Ireland on the Queen Mary. By this time all its remaining sergeant pilots had been commissioned. As of VE-Day the 82nd Fighter Group's score of confirmed aerial victories stood at 548 aircraft shot down, plus a huge amount of enemy materiel - including aircraft - destroyed on the ground and the sea. It had been awarded three Distinguished Unit Citations. The cost of this success was high, however, for around 250 of the group's pilots had either been killed in action or captured.

Assault on Kapustin Yar

Guardians of the Timeline -

Xlibris Corporation In winter 1944 the Nazis complete a pair of atomic bombs, the Manhattan Project is woefully behind schedule, and a derelict spacecraft from the future crash lands in Russia. Sixty years later the Russians have constructed a top secret military base called Kapustin Yar around the wreckage. The Guardians of the Timeline discover that in the aftermath of a major conflict one of their team has been lost in time and meet a mysterious group of people who cause each member to question the paradox of freewill and predestination. The newcomers are as passionate about preserving the timeline and finding the missing team member as the Guardians. They combine forces and embark on an adventure that takes them from the desert of Iraq, to the caves of Easter Island, to a life or death race against time on the freeways of Los Angeles, and ultimately to an assault on Kapustin Yar. There they seek access to the remains of the spaceship that crashed sixty years before so that core members of the team may embark on a mission to ensure that events in 1944 transpire as they should and the timeline is preserved. Assault on Kapustin Yar is the third book in the Guardians of the Timeline series.

Tilt Rotor Aircraft

An Illustrated History

Schiffer Publishing This book describes in superb pictures and text the fascinating genre of tilt rotor airplanes. Since the first helicopters flew, attempts have been made to create a link between the mobility of the rotorcraft and the speed of the winged airplane. At first these attempts failed simply because of constructive difficulties, since the technology had not advanced far enough. The progressive development, though, created in the past decades new possibilities, and thus led to the V-22 "Osprey", which has meanwhile been produced in series and is used by the U.S. forces. A civilian model, the Bell/Agusta BA 209, will soon be introduced commercially.

Hawker Hurricane Mk I-V

Bloomsbury Publishing At the outbreak of World War II, only 111 Squadron and a handful of others were equipped with the Hurricane. Thanks to sudden massive orders and a well-organized Hawker sub-contracting production to Gloster and General Aircraft, more squadrons rapidly became operational. Cutting their teeth during the Battle of France, it was during the Battle of Britain that the type excelled and came to form the backbone of Fighter Command. While the Hurricane was steadily overtaken by the Spitfire in the fighter defence role, it remained the fighter of choice in North Africa and the Far East. Despite a large number being shot down in these far-flung conflicts, many received hasty repairs and returned to the fray while more fragile designs were permanently grounded. The Hurricane may not have been the prettiest or, the best-performing aircraft but, as Francis Mason stated: 'The Royal Air Force was glad to get the Spitfire...it had to have the Hurricane!'

American Nightfighter Aces of World War 2

Bloomsbury Publishing The Americans lagged behind their European contemporaries in military aviation in the late 1930s, and it took the Battle of Britain to awaken America to the necessity of having aircraft that could defend targets against night-time attack by bomber aircraft. This book examines the numerous aircraft types that were used by the US in this role, beginning with the early stop-gap conversions like the TBM Avenger, Lockheed Ventura and the A-20 Havoc (P-70). It goes on to detail the combat history of the newer, radar-equipped Hellcats, Corsairs and Black Widows that were designed to seek out enemy aircraft and which registered most of the kills made by the Navy, Marine Corps and USAAF in 1944-45. With full-colour profiles and rare photographs, this is an absorbing account of an underestimated flying force: the American Nightfighters.

C-47/R4D Skytrain Units of the Pacific and CBI

Bloomsbury Publishing From Pearl Harbor to VJ-Day, the humble Douglas C-47/R4D carried out missions every bit as strategically important, and as dramatic for the aircrew involved, as those of the fighters and bombers in the vast Pacific/CBI theatres. The C-47's wartime operations paved the way for post-war military and civil air transport, proving that aircraft could safely conduct routine flights from the USA, Australia and India throughout the Pacific and South-east Asia. The flights also demonstrated how the USAAF was able to invest in, and carry out, a mission that it had barely prepared for in terms of doctrine pre-war. In addition to linking theatres, the C-47 found itself in the vanguard of combat operations on virtually a daily basis in New Guinea, Burma, the Philippines, the SWPA and China. The importance of these missions, and the dangers faced by crews tasked with carrying them out, is chronicled in numerous first-hand accounts from the aircrew involved in this unique volume on the Allies' favourite transport aircraft of World War 2.

Tanks

100 years of evolution

Bloomsbury Publishing From an internationally acclaimed expert in the field comes a detailed, analytical and comprehensive account of the worldwide evolution of tanks, from their inception a century ago to the present day. With new ideas stemming from the latest academic research, this study presents a reappraisal of the development of tanks and their evolution during World War I and how the surge in technological development during World War II and the subsequent Cold War drove developments in armour in Europe and America, transforming tanks into fast, resilient and powerful fighting machines. From the primitive, bizarre-looking Mark V to the Matilda and from the menacing King Tiger to the superlative M1 Abrams, Professor Ogorkiewicz shows how tanks gradually acquired the enhanced capabilities that enabled them to become what they are today - the core of combined-arms, mechanized warfare.

Observations of Composites for Civil and Military Aircraft

CreateSpace Development of multifunctional drones using a base projects open a new ways of aviation civil and military technology's. Protection drones from missile attract has a priority right now. Missiles explosion create magnetic waves display by sensors, which give command to rockets drones to move missiles outside the drones. Heavy bombardier X-47B drone successfully start flight from Carrier.X-47B distinguished from X-48B Boeing Phantom blended wings tested in 2006. Both has a carbon fiber bodies. Supersonic combustion Ramjet and Ultrasound Control digital stiffness and strength parameters also includes in new Manuscript. Dynamic mechanical and thermal strength predictions and light weight nanoscale structural are the parts of this book. Lightweight and fatigue strength of composites boost applications in Civil and Military Aircraft's. Boeing 787 Dream Lines and Civil Airbus A350 C-17 Transport uses 50% composites. Carbon fiber composites have a high strengthto -weight ratio than traditional aircraft and carbon fiber in 2.5 times lighter than titanium. Composites are used on fuselage, wings, tail, doors and interior. Civil Boeing with composites has a sonic properties and Bell Boeing V-22 Osprey military transport uses also 50% composites. Civil Airbus A350 use composite panels on a frame and C-17 transport has over 16,000 lb(7300kg

No 91 'Nigeria' Sqn

Osprey Publishing From its humble beginnings as a reconnaissance flight, using second-hand aircraft at the very end of the Battle of Britain, No 91 'Nigeria' Squadron went on to become one of the most famous units in RAF Fighter Command. It achieved outstanding results using new low-level interception tactics along the south coast of England, employing the very latest marks of Spitfire. Indeed, it was one of the few fighter units to be Spitfire-equipped throughout World War 2. Manned by a multifarious band of pilots from across the globe, No 91 'Nigeria' Sqn also produced its fair share of aces.
